THE BEST BBC MICRO SOFTWARE

PRODUCED BY AN INDEPENDENT SOFTWARE HOUSE
★ TOP QUALITY MACHINE-CODE PROGRAMS ★

BBC

HUNCHBACK (32K) £7.95
An excellent version of the arcade game where Quasimodo attempts to rescue Esmeralda. Beautifully detailed animation (the best we've yet seen!) as Quasimodo leaps over the ramparts dodging rocks and arrows, swinging on ropes, avoiding the guards' spears, and ringing the bells. Twelve different screens of action! This program is sold under licence from Century Electronics Ltd, we have exclusive rights to its sale for use on the BBC micro.
(For use with KEYBOARD or JOYSTICKS).
●●● NEW RELEASE ●●●

CRAZY PAINTER (32K) £7.95
The only full-feature version available for the BBC micro. On the first screen, you take the part of a monkey being chased by African tribesmen. If you manage to survive by painting-in all the squares, the bonus screen features the monkey trying to reach his bunch of bananas. After that, you take control of a paint-roller and each square painted in adds to your score. But beware... the teddy-bears are now in hot pursuit. Superb animation and sound-effects.
(For use with KEYBOARD OR JOYSTICKS).
●●● NEW RELEASE ●●●

2002 (32K) £7.95
A space docking simulator using a 3D graphics to model the motions and responses of the ORION 4 spacecraft. Your mission is to pilot the shuttle to a "soft dock" with the space station. PITCH, YAW, ROLL, FORWARD, LATERAL and VERTICAL engines are provided together with orbit manoeuvring booster engines. 6 skill levels provide for the completely inexperienced pilot as well as the fully-fledged commander.
●●● NEW RELEASE ●●●

ALIEN DROPOUT (32K) £7.95
A novel and unusual program. Arcade-action with this exciting multi-stage shooting game. You have to shoot the aliens out of their "boxes" before the "boxes" fill up. Once full, the aliens fly down relentlessly, exploding as they hit the ground.
(For use with KEYBOARD or JOYSTICKS).
"... these moths are out to get more than the clothes in your wardrobe."
... YOUR COMPUTER

FAIRGROUND (32K) £7.95
An exciting target-shooting game! Bonuses are scored for spelling out the word FAIRGROUND by hitting the appropriate target letters, and for shooting all the targets. Extra bullets are obtained by shooting the numerical targets, but watch out for the "smileys" who are intent on stealing your bullets. Music, sound effects, hi-score, and rankings.
●●● NEW RELEASE ●●●

CENTIPEDE (32K) £7.95
Incredible arcade-style game featuring mushrooms, snails, flies, spiders, and the centipedes of course. Excellent graphics and sound. 6 skill levels, hi-score, rankings, bonuses, and increasing difficulty as the spiders become more lively and the number of mushrooms increases.
(For use with KEYBOARD or JOYSTICKS).
"Visually this game compares well with the arcade version, being colourful and clear."
... YOUR COMPUTER

ROAD RUNNER (32K) £7.95
The only full feature machine-code version available for the BBC micro. Features include: scrolling screen, radar display, 3 pursuing cars, checkpoint flags, fuel gauge, smoke screens, 6 skill levels, rankings, increasing difficulty, and sound effects.
(For use with KEYBOARD or JOYSTICKS).
"The game becomes very hard and has very smooth graphics. Excellent." ... BEEBUG MAGAZINE.

FROGGER (32K) £7.95
Not just another version of Frogger... this is the arcade-action version that you've been waiting to see. Graphically brilliant with gaping-mouthed crocodiles, diving turtles, flies, and frogs that flex their legs as they jump along. Increasing difficulty, and responsive controls.
(For use with KEYBOARD or JOYSTICKS).
"... very good indeed... fast flicker-free graphics and a frog that really hops!" ... BEEBUG MAGAZINE

ALSO AVAILABLE

SPACE FIGHTER (32K) £7.95
GALAXIANS (32K) £7.95
INVADERS (32K) £7.95
FRUIT MACHINE (32K) £7.95
CRIBBAGE (32K) £6.95
PONTOON (32K) £6.95

Now that the Christmas celebrations are over and your body is returning to normal after an orgy of over indulgence, may I welcome you to our January issue and wish you all a very happy and prosperous new year.

It will certainly be prosperous for at least one of you — the winner of our Christmas Crossword Competition, and we are looking forward to receiving lots of entries containing the correct answer to the brain teaser, which should have kept you well-occupied over the Christmas holidays.

To welcome in the new year, we bring you a test report of the new Laser 200 computer, which we had promised would appear in the December issue. Our technical hitch up was solved and we have prepared this ready for those of you with Christmas money to spend and are looking around for a computer. Before doing so, turn to the special review and also to our Hardware Factfile which will give you hints about which one to go for. Turn, also to our Add On Action section for news and reports of the many peripherals to add to your system.

Those of you who already own computers will be interested in the many programs for you to type in. This month we feature games and utilities for the **Atom**, **TI-99/4A** and **Atari** micros to name but a few and hints on conversion to other machines.

And for those of you still feeling too lethargic to type in your own program we bring you a round up of the latest commercial software on the market and tell you whether or not it's worth buying. Whatever your choice, have fun!

Turn over
the page for a full
contents list of this issue.

ATARI PRICES REDUCED!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

NEWS NEWS NEWS

Printer in a matchbox

... Well, not quite but Brother have produced the world's smallest printer/typewriter, which is also probably the cheapest of the combined machines. The lightweight nifty little machine is a dot matrix thermal or ribbon printer with a comprehensive QWERTY keyboard and 12 digit calculator. The keyboard features a versatile second shift for accents and a range of signs for arithmetical or chemical formulae, including automatic superior and inferior numerals. It will even check that you put the accent over the right character!

Correction facilities include a 32 character 'buffer' and 16 character screen display with a cursor controlled insertion, deletion and otype. Still more outstanding features are its 2K continuous memory which stores about a page of A4 text for corrections and remaining memory and most importantly for computer users, it is capable of interfacing with a computer's disc or tape memory.

Watch these pages closely, but until our review, note the price — recommended £169.95 but available in Argos shops for the amazine price of £119.

Cumana Comes On Strong

Cumana, leading floppy disc drive distributors, have developed their own slimline disc drives for the BBC and Dragon Microcomputers. These elegant 5¼ inch Japanese disc drives are available in single sided 40 and 80 track, and double sided 80 track formats. Each one has an easy-to-use manual door mechanics and heat dissipation without ventilation holes to prevent any risk of inquisitive young fingers poking screwdrivers into the electronics.

Cumana's design includes an independent

power supply complete with mains power supply lead and plug — enabling up to two and four disc drives to be added to the BBC and Dragon microcomputers respectively without any modifications to the computer or risk of it overheating. Available from high street stockists.

Late Christmas Shopping

For any last minute panic buys The Personal Computer Handbook would be a good investment for micro-owners, indeed any interested parties.

Described as the foremost guide to the new home technology, this book by Helen Varley and

Ian Graham gives comprehensive information about microcomputer elements, how they work and how to live with them and an interesting section on future technology. Bound in an attractive plastic cover, it offers good value at £5.95. Published by Pan and available from all good book sellers.

Spectrum to be Video Star

W. H. Smith are out to make a video programme featuring the Spectrum microcomputer. Their action is in response to increasing consumer demands for computer educational aids.

'Introduction to Programming' is the Company's first own-brand video title and is now available at larger branches around the country. Priced at £16.95 the video is available in two levels: level 1 for beginners, explaining Basic Programming by David Redclift, one of Britain's foremost programmers as well as four BASIC programs which can be transferred directly into the user's own computer. Level 2 features an introduction to the more advanced aspects of programming including array handling, string slicing and animation and two programs for transfer into the Spectrum.

Service For T199/4 and /4A Owners

Anyone requiring listings for programs written on these machines can get them quickly and efficiently from P.G. Brookes of Oxford. The service will cope with programs written in either TI or Extended BASIC, sent in on cassette

or disc. Owners should specify whether the listing is for the 99/4 or /4A and whether they are in TI or Extended BASIC.

Other services are available and anyone interested should contact Mr Brooks on Oxford 71785 during normal office hours.

NEWS NEWS NEWS

Read While You Wait

Whilst waiting to get hold of your promised Acorn Electron, you could while away the time by reading a new book telling you how

to program it. **The Electron Programmer** by SM Geen and Mike James is published by Granada at the very reasonable price of £5.95. Then you'll know what to do with your machine when you get it!

Coordinate Your Brain Power

Phoenix Software are about to revolutionise arcade game playing by linking in the hand/eye coordination skills of players to more intellectually demanding tasks. Their twin cassette packs containing an exciting action game and an adventure game will retail at £9.99 each.

The action game has four skill levels, and at the end of each one a clue, vital to the solving of the adventure program, will be flashed on the screen. At the end of the fourth skill level, the player will be given the loading code for the adventure sequence. This way, action players have a purpose. No longer will they merely attempt to exceed a previous score. Now there is a target — the adventure program loading code.

For the adventure player, there is now the exciting obstacle of the action game to overcome. There are six games in the series which should be on the shelves of your high street computer store. Look out for our review of *Death Mines of Sirius* next month.

Explosion In Rabbit Population Expected After Merger With CBS

Due to an agreement between Rabbit Software and CBS, their software will now be available at all

stockists of CBS records and videos. This comes at a time of rapid expansion in the Rabbit Software Company which has also recently extended distribution of its computer games into Boots, WH Smith and Rumbelows.

Master Of The Microdrive

Following hot on the heels of the launch of the long-awaited Sinclair ZX Microdrives comes a book to help you master the beast. Written by Andrew Pennell, a university student and programmer, and published by Sunshine Books, the book boasts to

contain all the information you will ever need to use the ZX Microdrive to the full.

Covering streams and channels, file handling, program protection, the use of the RS232 Interface and machine language, the book is certainly comprehensive and promises to be good value at £6.95.

No Frying Tonight

Elkan Electronics have come up with a simple and novel safety device to prevent overworked and bleary eyed late night computer users, from drifting to the land of nod before switching off their machines. The device is also of tremendous help in preventing the over-eager from loading a cartridge or disc drive into the cartridge port of the machine while it is still switched on.

The aptly named Dragon's Eye on/off indicator enables you to tell quickly whether or not your machine is on. It is available for the Dragon and Tandy machines and is installed simply without any soldering. It costs £2.95 and is available from **Elkan Electronics, FREEPOST, 11 Bury New Road, Prestwick, Manchester (061-798-7613).**

Club Contacts

The contact for the Grimsby Computer Club has changed. Ian Lee is the new Membership Secretary and he can be reached on 0472 49248 or by writing to 28 Phelps Street, Cleethorpes. The club meets on alternative Monday evenings at St James School Assembly Hall, College Street at 7.30 p.m.

Aylesbury Computer Club have dropped the prefix 'ZX' and now cover all makes of home computer. The club continues to hold weekly meetings at Quarrendon School each Friday at 7.30 p.m. and monthly meetings at the Mandeville Centre.

Further information by phoning David Nowotnik on Aylesbury 630867.

Oric Owners' Users' Group (International) Ltd is a newly formed group supporting the popular Oric-1 Microcomputer. Membership to this Group will cost £10.00 per year which will include 12 monthly issues of their magazine, 'Oric Computing'. New members will also receive, under the current promotional campaign, an Oric MCP 40 4 colour printer discount voucher to the value of £40.00 (see Add-ons for our review). For further information telephone 0934 510279.

Memotech MTX

Flying the flag for Britain in the competitive home computer and small business machine market, Memotech have recently launched their MTX range of personal and professional micros.

Manufactured in Oxfordshire, there are two machines in the range, the MTX512 which has 64K of RAM and the MTX500 with 32K. We have managed to get our hands on the larger machine and after a full investigation will be reporting our findings in the February issue of *Personal Computing Today*.

Both machines are fully expandable to 512K allowing the machine's use for personal programming, games playing, scientific or process control, educational or business use. There are several languages and routines present in the 24K ROM enabling the novice or experienced programmer to make full use of the machine.

Sixteen colours and 40 column text, are just two of the standard functions available on the machines. The outputs include a centronics printer port, two joystick ports, 2400 Baud Cassette port and separate TV and Video Monitor ports.

So for such competitive prices as £315 and £275 the Memotech machines promise to be interesting packages, so order your February copy of *Personal Computing Today* from your newsagent now using the coupon below.

Little Brother

A remarkable printer/typewriter has recently broken onto the com-

puter scene. The EP-22 from Brother Limited is a lightweight, briefcase-sized machine which can be used as a typewriter/calculator or which may be interfaced to a computer.

It features a dot matrix printout onto plain or thermal paper, 1K of memory and a small screen giving a 16 digit readout, so if used as a typewriter, you can check the text before printing it out and hence have perfect copies everytime!! One of the most remarkable things about it is the price — at a recommended retail

price of £169 for a computer printer, the larger machines had better watch out. We'll be giving you the ins and outs of this unit next month.

And more

An usual we'll have a terrific selection of programs for you to type into your machines, along with lots of explanations and hints on how to convert to other micros.

News, views and reviews of the latest happenings on the computer market will keep you right up to date with the micro world.

YOUR MICRO COULD TEACH YOU A THING OR TWO ABOUT THE FRENCH... ...OR THE GERMANS...OR THE SPANISH

A home computer is an expensive toy; and, if playing games is all you do with it, a toy is all it is.

Now, using the New Personal Computer Superlearning System (PCSS) you can have fun with your micro and learn something at the same time.

PCSS language courses comprise 12 lessons on 3 audio cassettes used in conjunction with a fourth software cassette, to add a new dimension to learning.

Initially the software package enables you to see the words you're learning; then, as your vocabulary develops, it will test your skill in your new language.

Anyone can learn this way – no previous knowledge of the language is required. The unique PCSS method develops your overall learning and memory skills in a way that's both relaxing and enjoyable.

Each PCSS language pack – French, German or Spanish – contains a comprehensive booklet detailing

the 12 audio lessons and the function of the interactive software. Additionally the booklet expands on the broader benefits of the PCSS method.

At only £29.95 per pack PCSS costs less than other home language courses yet it offers much more in terms of education and enjoyment.

Complete the coupon below and try PCSS for yourself – you'll be amazed what your micro can teach you.

MDA

COMPUTERISED EDUCATION SYSTEMS

(PCSS software is compatible with the ZX81 (16K), ZX Spectrum, BBC Micro, Acorn Electron Micros.)

Each pack comes with a full money back guarantee if not completely satisfied.

Send your cheque or Postal Order for £29.95 made payable to:
**MDA Modon Associates Limited, 561 Upper Richmond Road West,
London SW14 7ED.**

or, alternatively phone **Teledata 01 200 0200** now, lines open 24 hours and quote your Visa, Diners Club, Access or American Express number.

Tick which Audio/software package you require. (Prices include VAT. Add £1.45 for postage and packing on each order.)

Please supply the following Audio/software Packages

'NOW WIN THE POOLS'

THIS IS MEANT FOR YOU — ESPECIALLY IF YOU USE A SINCLAIR ZX81 or SINCLAIR SPECTRUM COMPUTER, or even ANY COMPUTER.

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" — AT LAST YOU CAN TURN IT INTO REALITY.

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" — **IT CAN BE DONE.** I DISCOVERED THE SECRET A LONG TIME AGO — NOW, **FOR THE FIRST TIME** I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU — I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS/ CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:—

First Dividends	Second Dividends	Third Dividends	Fourth Dividends	Fifth Dividends	Sixth Dividends
765	1,818	2,942	1,952	631	93

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS — so far).

I HOLD THE UNCHALLENGED WORLD'S RECORD FOR POOLS WINS

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" — since I perfected my method, **I HAVE WON REGULARLY** for over **TWENTY-FIVE YEARS** — proof that it is no 'flash-in-the-pan'.

I have **CHALLENGED THE WORLD** with my record of wins and with all the evidence that I possess — **NO ONE** has ever been able to accept the Challenge — **I KNOW NO ONE EVER WILL.**

MY SECRET IS NOW PLACED ONTO COMPUTER CASSETTE FOR YOU.

THE METHOD IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS — IT WILL LAST FOREVER — BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS.

I now intend to give a limited number of people the opportunity of making use of my method — perfected over 25 years and proving itself on **EVERY ONE OF THOSE TWENTY-FIVE YEARS.**

You will have noted details of my personal achievements so far, as given to you above.

A GRAND TOTAL of 8,201, yes 8,201 POOLS DIVIDENDS, including **765 FIRST DIVIDENDS.**

My Pools Winnings Dividend slips now number so many, that they fill a very large suitcase and will stand as my evidence of all claims in **ANY COURT OF LAW IN THE WHOLE WORLD.**

Taking just the past 25 years into consideration, I have won **ON AVERAGE** over 328, (THREE HUNDRED AND TWENTY-EIGHT) Pools Dividends **EVERY YEAR** — or — **AN AVERAGE** of over **SIX DIVIDENDS EVERY WEEK** for **TWENTY-FIVE YEARS.**

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc, contained herein.

Don't take my word for it, read what people write about me and my method:—

I won on Zettlers last weekend. It was not a big sum, but all the same it was a very nice surprise for me. J.C., Lancs.

I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self-opinionated charlatans. C.H., Devon

Winnings cheque received today, sincere thanks. D.N., Devon

I congratulate you on your achievement. R.R., Wales

I should like to thank you for a most exciting season and look forward to hearing from you again. J.C., Hants.

I would like to acknowledge cheque and say how much I appreciate your integrity. J.M., Scotland

Many thanks for your system, it is all you say and more. J.C., Lancs.

Your wonderful system won me £3,527. I intend to visit London soon and will be able to come and see you personally. (Overseas Client). P.M., Kampala.

Many thanks for trying so hard to please us all, your brother should be thanked also. One of our daughters, WHOSE HUSBAND YOU HELPED ENORMOUSLY, has just phoned, the four of them have just spent a lovely holiday in Spain. K.R., Isle of Man.

I do have losing weeks, but **ON AVERAGE** my winnings show over **SIX DIVIDENDS EVERY WEEK** for the past 25 years.

I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact. Please just sit back and **imagine** for a moment my **FIRST DIVIDEND** wins alone — they now number 765 (seven hundred and sixty-five) and will probably be even more by the time this advertisement appears in print.

I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT.

For as long as I continue to enter the Football Pools my wins will continue. I have already said, they apply, with equal success to both English and Australian Football Seasons.

I intend to release a **STRICTLY LIMITED** NUMBER of copies of my cassette, (either for Sinclair ZX81 or Sinclair Spectrum) — **DO NOT DELAY AND FIND YOU ARE TOO LATE**, in which case I would have to refund your money.

I am so confident of **YOUR** success that if do **not** win at least **THREE FIRST TREBLE CHANCE** DIVIDENDS in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time, no matter how vast your winnings.

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc, but it is of course impossible — they now number 8,201 dividends. I have however given **JUST A FEW EXTRACTS** from **ORIGINAL LETTERS** I hold from my small Clientele.

I am the Inventor and Sole Proprietor of my method, Registered as **EUREKA** — ('I have found it'). I am known as The Professor in Pools Circles — I am of the Highest Rank in Forecasting — this is beyond dispute. I am marketing a limited number of Computer Cassettes, under my Registered Company — **FOOTBALL ENTERPRISES.**

My initial charge for a copy was £75, but for this **SPECIAL REDUCED PRICE OFFER** I will send you a copy, (for ZX81 or Spectrum) for £20, (twenty pounds) **ONLY**, plus your Promise to pay me the balance of £55 — **ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS IN YOUR FIRST 20 WEEKS OF ENTERING** — otherwise you owe me **NOTHING FURTHER.**

This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery. I could easily **CHARGE** £2,000 per cassette on the evidence I possess, but that would not be fair to everyone, which is what I want to do.

My method is **WORLD COPYWRIGHT**, any infringement and immediate proceedings will be taken, without prior warning. It is truly ingenious and has stood the test of time.

My cassette is simplicity itself to operate and you'll be given **FULL DETAILS** for weekly calculating. Your entry need not involve you in any large weekly stakes, you can enter for as little as 25p, if you wish.

I charge **NO COMMISSION** on any of your wins — no matter how **BIG** they may be.

I realised a long time ago, that it was no good sitting down and **dreaming** about winning the pools, so I burnt the candle at both ends, working late into the night, occasionally **RIGHT THROUGH THE NIGHT**, I **KNEW** there was a way, eventually it all paid off and has been doing so ever since.

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the cassettes I have prepared and am making available.

IMMEDIATELY I perfected my method I commenced winning right away, (first with just a little £163, the first week I used it), I **HAVE NEVER LOOKED BACK SINCE**, amongst all those dividends was one for over **EIGHT THOUSAND POUNDS** for just **one eighth of a penny stake.**

I will release a copy on cassette, to you, on receipt of the completed order form and your Signature thereon, confirming you will treat it in the **STRICTEST CONFIDENCE** between us and retain it for your **OWN USE ONLY.**

PLEASE NOTE:

If you happen to be the proud owner of a Computer, **other than** a Sinclair ZX81 or Sinclair Spectrum, you can still purchase a copy of my method, for the same price and program it **YOURSELF** on to **YOUR OWN COMPUTER.**

I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once I've won a fair amount I shall be staking from winnings and at 2p per line, A FIRST DIVIDEND last week at this would have been over £3,000. C.A., Yorks.

I am very interested indeed and enclose £20 herewith. I agree to pay you the balance of £55 **ONLY** if I win at least **THREE FIRST TREBLE CHANCE** DIVIDENDS in my first 20 weeks of entering — otherwise I owe you **NOTHING FURTHER** at any time — no matter how much money I win. My Signature below is my Undertaking to retain complete and absolute confidence about the method.

SOFTWARE

REVERSI

Turn your life upside down with this game of strategy specially written for the 48K Oric by Alan Northcott.

Reversi is a board game of tactical skills invented at the turn of the century. It was later 're-invented' and called Othello.

The game has been written in program form for one or two players. When input into your Oric

a grid will appear onto which the players must place their pieces in an effort to 'capture' the ones of their opponent's. The strategy comes in when deciding where to place your piece. One of your counters either side of your opponent's (in any

direction) allows you to convert your opponent's piece to one of your own. The game ends when one player has all the pieces on the board. It is obviously harder to describe than to play but it is a fascinating and absorbing game.

List of Variables used:

X,Y (Value 1-8)	Used generally in board setup, then to pass position to piece drawing routine
XC,YC (1-8)	Position of cursor used during player input
NX,NY (1-8)	New square under consideration in moving/taking routine
LX,LY,HX,HY (1-8)	Limits of initial consideration, to speed move
DX,DY (-1.0 or 1)	Give direction from new square. . .
DIST	. . . and associated distance from new square
XBEST,YBEST (1-8)	'Best' playing position found (so far)
PTS	Points 'scored' by that position
SCRE	Points 'scored' by currently considered position.
WHITE,BLACK (1 or 2)	1 for computer playing that colour. 2 for

WP,BP
TAKE
VIB
VAR
T(X,Y)

BOARD(X,Y)

Also used:—

Boolean Variables:-
MOVING is TRUE when calling the taking routine to move a piece, FALSE when only requiring a value returned in TAKE.
GAMEOVER is TRUE if there are no moves left, or the board is full, or end requested.
LEGAL is made FALSE if there is no legal move for a player
QUIET is TRUE if no sound is required.

player.

Number of white and black pieces
Taking power of a move (no of pieces)
Period of SOUND commands
Change in pitch
Tactics array with a value for each square
Board array, 1 = Empty square,
2 = White 3 = Black
N,TURN,ENEMY,A\$,PL\$,Z,COLOURS

HOW IT RUNS

Lines 10-30 Set screen and HIMEM stops character corruption

Lines 40-50 Display title in double-height, without cursor

Line 60 Goto routine to read tactical values

Lines 70-80 Goto instructions, if required

Lines 90-150 Ask and set if sound required

Line 160 Goto routine to set starting position

Line 170 Goto routine to determine number (type) of players

Line 180 Starts playing loop

Lines 190-225 Black's turn

Line 195 Displays score

Line 200 Checks for legal move and jumps if none

Lines 210-220 Make or get Black's move

Lines 230-260 White's turn — as Black's

Line 270 End of game

Lines 280-320 Another game or end

Line 1000 TAKE will be set to number of pieces captured by moving to NX, NY

Lines 1010-1020 For each direction in turn

Lines 1030-1050 ... at increasing distance DIST

Line 1060 ... until no longer enemy pieces

Line 1070 No enemy pieces encountered

Line 1080 Ensure next piece is own

Lines 1090-1210 Section to capture taken pieces

Lines 1120-1150 Set limits of move search

Lines 1220-1230 Next direction

Lines 2000-2460 Display two screens of instructions

Lines 3000-3130 Enter tactical values, read from the data statements, into the T(X,Y) array. The values, which are open to experimentation, range from 10 for the valuable corner, down to 0 & 1 for those squares adjacent to the corner, which may give it away.

Line 4000 Initialises HI RES display

Line 4010 Sets SOUND variables

Lines 4020-4090 Draw the board

Lines 4100-4140 Set all elements of the array BOARD (X,Y), which holds the current position, to 1 (empty).

Lines 4150-4190 Draw starting position

Line 4200 Number of pieces

Line 4210 Limits of move search

Line 5000-5020 Determine number of players

Lines 5030-5040 Computer plays itself

Lines 5050-5060 Two players

Lines 5070-5110 One player select colour

Line 6000 Not moving yet

Line 6010 PTS (points) for the position set to an arbitrarily low figure

Lines 6020-6030 Considering each square in turn

Line 6040 If not empty, then skip

Lines 6050-6060 Determine taking power (if zero, skip)

Line 6070 Move evaluation — the move is scored according to the tactical value T(X,Y), a random element to give variation, the number of pieces taken by the move and the total played. TAKE *(XP + YP-32) is negative in the first half of the game, thus discouraging high taking moves early on, which are generally thought to be disadvantageous, and increasingly positive subsequently, to encourage higher takes towards the end.

The evaluation is easily altered to change the importance of each element, and it is interesting to see the variation in style of play that can be achieved.

Lines 6080-6120 If best score so far, then the move is saved in XBEST, YBEST.

Lines 6130-6150 Call subroutine with MOVING = TRUE, to make the 'best' move

Lines 6155-6210 Option to interrupt game, as detailed in the instructions

Lines 7000-7060 Flash 'cursor', awaiting for a key press

Lines 7070-7110 Identify and act on cursor keys

Line 7120 RETURN pressed, go to moving part of routine

Lines 7130-7160 Game options

Lines 7170-7230 Check that the input move is valid then move it

Lines 8000-8100 Take each empty square in turn until a legal move is found, then make LEGAL = TRUE

Lines 9000-9100 Draw a white piece at X,Y

Lines 9010-9040 Sound

Lines 9050-9070 Draw 10 concentric circles

Lines 10000-10120 Draw a black piece at X,Y

Lines 10010-10040 Sound

Lines 10050-10070 Draw 9 concentric circles in background colour

Line 10080 Draws outer edge

Lines 11000-11040 Routine to display double height messages on bottom 3 lines in HI RES mode, with the previous message displayed (single height) above, as a reminder.

NIGHT RAID

Run into the dark depth of London with this skilfull game by S. Abraham.

The object of Night Raid is to guide your car rapidly around the screen blanking out the lights of London town as you go. You are in the midst of an air-raid and no

revealing light can remain or disaster will strike. As soon as you have completed this task you must report back immediately by pressing f0.

If your time runs out then a danger sign is printed and the sound of a bomb heralds oblivion. Use the Z, X, /, and : keys to control your vehicle.

Procedures

PROCTITLE	Sets up title.
PROCINST	Instructions for the game.
PROCGAME	Main part of the program.
PROCEND	Your time has run out.
PROCLONDON	Draws the City of London.
PROCLBLANC	Deletes the last char. on screen.
PROCPOINT	Sets the position for explosion.
PROCYOU	Sets bomb to explode on you.
PROC MUSIC	Plays a tune if you complete the screen.

Variables used

A-M strings	Defined characters.
X%, Y%	Car positions.
T%	Time variable.
D%	Amount of time you have.
B%,F%,A%,S%	Sound variables.
V%	Double height variable.
N,L	DATA letters.
Z	Answer for another game.

HOW IT RUNS

Line 20	Main program.	Lines 540-560	Print title.
Line 40	Sets colour of screen	Lines 580-640	Print instructions.
Lines 50-60	Define characters.	Line 650	Delete cursor.
Line 70	Prints car on screen.	Line 690-780	Choose level of difficulty.
Line 80	Sets time to 0.	Line 790-840	Draw the city of LONDON.
Lines 90-200	Loop for movement of car using cursor keys.	Line 850	Sets co-ordinates for explosion.
	Checks key f0 and time.	Line 860	Sets bomb to explode on you.
Lines 210-240	Set the co-ordinates of the car.	Lines 870-930	Print message if screen is completed.
Lines 260-280	Delete last character.	Line 930	Prints your time.
Lines 290-520	DEFPROCEND sets strings. PRINTs danger warning and explosion.	Lines 940-990	Play tune.
		Lines 1000-1030	Ask if you can beat your previous time.

MISSILE DEFENCE

MISSILE DEFENCE

Brings the well known arcade game to life on the Spectrum screen in glorious colours. Defend your cities from the missile attack and smart bombs. 10 skill levels.

KB/JS 16K/48K £5.95

SLAP DAB

An exciting game based on the arcade game Painter which combines fast action with strategy. Giant insects hiding under the old paint surface are released by your paint brush. You require fast action and quick thinking to outwit them and finish the panel. The game is 100 percent machine code and Hi-RES. Graphics also includes Hi score and running score.

KB/JS 16K/48K £5.95

GALACTIC ABDUCTORS

A stunning action packed game with superb large animated graphics. Giant Space Hawks whirl and weave in intricate patterns as they drop their deadly homing mines which will destroy your base on contact. While you are busy defending yourself the Hawks will feed on your helpless population returning only their skulls. All M.C game complete with high score table that will blow your mind with its graphics and sound effects.

KB/JS 16K/48K £5.95

FROGRUN

Popular arcade game. All machine code with brilliant colour graphics and sound effect. Features include: snakes, crocodiles, lady frogs, turtles, cars, lorries and logs.

KB/JS 16K/48K £5.95

TINY TOT'S SEVEN

Super games pack for younger children with bright colour graphics and sound effects. Everybody's favourite Simon plus Super Snap O's and X's, Word Jumble, Bomber, Duck Shoot and Mad Drivers.

YOUR LETTERS

This page is where you get the chance to put your opinions in print. Personal Computing Today welcomes letters from you on any aspect of microcomputing and views in general – as long as they're printable!

Please drop us a line to: The Editor, Personal Computing Today, 145 Charing Cross Road, London, WC2H 0EE.

Dear PCT

It was with joy that we noticed a CBM 64 'invader style' game in your November issue, and so short! We quickly typed in in and then spent ages de-bugging it!!

So for those readers who weren't as persistent as us, here are our corrections:

Line 30 — leave out the final 247 and begin line 31 with it, i.e. DATA 247,64,65... ending this line with 253. The final number (85) from line 31 must be brought down to begin Line 32.

An extra line is needed thus: Line 16 PRINT“(CLR HOME)” which is achieved by holding down the SHIFT key and CLR HOME.

Line 51 should read

POKE54273,34:POKE54272,75PRINT“(CLR HOME)”

Now the game should be playable. However, we're not sure it's worth it, what with invisible bullets, aliens which don't explode so you don't know when you've shot one, but which jump from halfway across the screen to the edge (athletic attackers?), and a gun which looks like a wigwam (which is perhaps why it can't shoot bullets!). We would have scored over a million but fell asleep before our invisible bullets managed to notch up 200 points, (or to be more exact 199.736).

Come on, we know you can do better than this. Decent software please.

Yours hopefully,
Edwin and Simon Sheaf
Hove

Editor's reply: Not too sure whether to thank you or not for this letter boys. I'm sorry the game wasn't up to your standards, but look forward to plenty of good games for the CBM 64 in the coming months and we'll try our best.

Dear PCT

I am writing to you in the hope that you have the courage to print this letter, being a Texas supporting magazine. I wish to expand my Texas to 32K but having spoken to Texas Instruments find that under no circumstances is the computer able to store more than 13K programs on cassette. To store a program greater than this it is necessary to buy a disc system. This is where the bug bites. The disc system costs approximately £500 including the discs, 32K memory card, disc controller and peripheral box.

This fact is not mentioned anywhere in Texas's advertising literature. They say the system is fully expandable to 32K, and this is true, but it's a high price to pay considering the basic machine is under £100. I hope you print this so that other people are duly warned. I hope that T.I. bring their prices down in the light of this or how can they hope to sell their products.

Yours faithfully,
MC England
Northwich

Editor's reply: Thank's for pointing out this problem. I'm sure many readers will find it interesting – maybe even T.I. themselves will take note.

Dear PCT

I write in response to the letter from Leonardo Esposito in the November issue of PCT. It appears he has trouble receiving a copy of PCT in time to enter your competitions because he lives in Australia. I am surprised you didn't suggest taking out an airmail subscription. I received the November issue on 12th October, which must compare favourably with the date it first appears on shelves in the U.K. Another bonus of an airmail subscription is that in comparison with other magazines on sale here with a similar U.K. price tag, it actually works out cheaper.

It is also worth noting that software etc can be obtained from U.K. advertisers. Anirog provide an excellent service with a receipt period of 10-12 days from postage. What we ex-pats need are more reviews of software and add-ons for the various computers. Manufacturers tend not to give a full description of their goods which results in readers having to find someone who 'knows a bit more about it' before buying.

Yours faithfully,
Bill Pemberton
Papua New Guinea

Editor's reply: Thanks for writing to us all the way from Papua New Guinea, Bill. The information you have given us about the airmail subscription should be useful to Mr Esposito and other overseas readers (see inside front cover). I'm sorry that you feel PCT falls short in supplying reviews of software and hardware but we have to fit these sections in amongst all the programs which readers want. As I've said before, all we can do is to provide a balanced magazine. You should have enjoyed reading the extended software review sections in the November and December issues anyway.

Dear PCT

I write to you following a remark made to me by a very experienced computer programmer. He said he thought it was a great pity that most people bought a micro simply to play games even when the cheapest micros are capable of carrying out quite complicated tasks. Having read most of the micro magazines over the last few months and spoken to several people, including businessmen contemplating buying a system, I am inclined to agree with him. Computers are a part of everyday life; whether you are buying petrol or groceries, paying bills or drawing money from a bank dispenser, one is in contact with a computer. A micro can be a very useful part of

everyone's life and as yours is the most readable magazine I have found, I write to you suggesting a scheme which may help bring the recognition the microcomputer deserves.

My idea is for your magazine to run an award scheme on a regular basis for the person who submits to you the idea most likely to help this cause. It could be a new game format, a home economics program, a plan for turning your home system from a jumble of wires that the wife is always complaining about into an attractive and functional piece of furniture, educational programs for the very young — in fact anything relevant to the cause.

I hope you will consider this and I would be interested in hearing your views on the matter.

Yours faithfully,
Paul W Saunders
Bury St Edmonds

Editor's reply: Thank you for writing in with this suggestion. Your point about microcomputers being much more than games machines is very true and supported by very many of our readers I am sure. This is borne out by the fact that we receive so many utility programs as well as games from readers. It is also noteworthy that the younger readers are turning to more stimulating and useful programs than the 'shoot them down' arcade type games. Your suggestion of having an award scheme is one which is well-worth considering. However, I believe that there is sufficient incentive for writing such programs/articles already and PCT is always ready to consider any material for publications. So, any of you with ideas, get them down on paper and send them in!

Dear PCT

My 16 year old son was excited to read in various publications, including your November magazine, that the Electron was available. He forthwith sold his Spectrum machine expecting to be able to buy the Electron in Truro or Plymouth. However, after many 'phone calls around dealers in the South West, we were told that November would be the earliest any of the dealers would have a stock of these microcomputers.

I am very indignant that after such extensive advertising, Acorn are not producing the goods. Surely there is no need to advertise so freely weeks before the machines are available.

Mrs M R Ferrett
Boscastle, Cornwall

Editor's reply: I'm afraid Acorn Computers, who manufacture the Electron, are only following common marketing procedure in advertising their product so comprehensively. However, once again, it appears that this marketing policy have been too successful and demand is exceeding supply, as happened with their BBC microcomputer.

I contacted Acorn Computers in October and at that time, I was reassured that the Electron was being produced on schedule and that distribution to W.H. Smith was occurring at the projected rate! The major stores were receiving large stocks and the branches were being supplied by them. Stocks were expected to be sufficient by December to meet the Christmas demand. The Acorn shop is Charlotte Street, London (opening date end of October) should by now be able to cope with the expected demand. I hope

your son has been fortunate enough to have found and purchased a machine.

Dear PCT

RE: Your Oric v Spectrum article in the October issue

I read the above mentioned article because I own an Oric, bought after long deliberation between that and the Spectrum. I did a little comparing myself before buying the Oric and I came to somewhat different conclusions to Mr Nowotnik.

I won't go as far as accusing him of being subjective but I find it strange that he only mentioned features of the Spectrum which are absent from the Oric. The Oric has "IF, THEN, ELSE", "REPEAT UNTIL", "DOKE (double POKE)", "DEEK (double PEEK)", "WAIT", statements which I found lacking in the Spectrum.

I agree with him about the problems of software, but there is some fairly good stuff now flooding onto the market for the Oric and it is improving in quantity and quality all the time.

Furthermore, I disagree with Mr Nowotnik about value for money between the two machines. He bases his figures solely on the price but the Oric price included a Centronics interface, while the Spectrum price is for the machine alone.

Although I uphold the right of free speech and personal opinions, I think Mr Nowotnik should have been a little more objective, since as he says in the article, he is writing to help us decide which of the two comes out on top.

Yours faithfully,
P. Kolenbrander
Eindhoven
The Netherlands

Editor's reply: Many thanks for your comments. It is always difficult to put across a totally unbiased view but we felt, like many other readers, that Mr Nowotnik did a commendable job. But, as you say, we're all entitled to our opinions and we love to hear them.

As your childr so can your

600XL Home Computer.

If you're buying a home computer then you've probably got one major worry. That your children will soon grow out of the system you buy.

With the new ATARI 600XL™ you need have no such fear. Because the ATARI 600XL was not just designed as a home computer, it's designed to build into a complete computer system.

As your children's knowledge of computers increases, so can their home computer, simply by adding any of these extras which will be available soon.

Program Recorder. The inexpensive way to store extra programs, and use the unique Atari sound-through system.

64K Memory Module. Increase the memory from 16K RAM to a massive 64K RAM. Important, as the more memory it has the more it can do.

Touch Tablet. Creates complex on-screen graphics by allowing you to draw on the TV screen.

Trak Ball™ Controller. For a better and more sophisticated arcade style game control.

en get bigger Atari 600XL.

LASER 200 REVIEW

David Nowotnik dodges the beams to get to the core of the matter.

The main claim to fame of the Laser 200 is that at £70, it is Britain's lowest priced colour computer. It verifies that old rule of thumb that you only get what you pay for. The low price is achieved by providing the user with the most basic of computer systems.

The Laser 200 is a good-looking computer. It comes in a white plastic case with a comfortably angled forward sloping keyboard. The 56 rubberised keys of the QWERTY keyboard are orange in colour, and have a feel identical to the keys of the Spectrum. The keys are small and spaced closer together than on

professional keyboards, making typing difficult.

At the rear of the computer are two ports; one is for memory expansion, the other for either a joystick adaptor or the Centronics printer interface adaptor. These are the only promised add-ons for this computer. There is a choice of output to TV or monitor, although there is no clear indication which type of monitor can be used.

Supplied Extras

The computer is supplied with an external power supply, TV and

cassette leads, a demonstration tape, and three manuals. The 150 page 'BASIC Reference Manual' provides a reasonably good introduction to BASIC. A six page user manual explains how to set up the computer, and a 24 page booklet gives some simple programs to type in. The whole package is aimed at the beginner; there is little to help the more experienced programmer to find out more about the system.

BASIC Language

The Laser 200 uses standard Microsoft BASIC in a 16K ROM.

Commands and functions can be entered either by typing the word in full, or as a keyword. With less than 35 commands available to the user, the Laser 200 is not a powerful computer, but should be easier to master than most other micros. There are no obvious bugs in the BASIC translator. The operating speed is quite fast; in tests I found it ran faster than both the Oric and Spectrum machines, and about the same as the vastly more expensive Commodore 64.

There are two display modes; mode 0 offers text and low resolution graphics. Mode 1 is generously called high resolution in the handbook, but it has rather poor 128 x 64 pixel resolution. In mode 0 you get a screen display of 32 x 16 characters. The Laser 200 has upper case characters only, no '£' symbol, and a small range of quarter square graphic characters to give 64 x 32 chunky graphics which you can mix with text in mode 0. In each mode your choice is restricted to two background colours. Text can only be white in colour, although INVERSE will swap background and foreground colours if desired. All eight colours on the screen at once can only be achieved with the chunky graphics of mode 0. In high resolution mode, you can only have four foreground colours, and one of these is the same as the background colour. I tried the Laser 200 on several colour TV sets and the colour quality was never particularly good.

Hi-Res Restrictions

High resolution drawing is difficult. There are just two high resolution commands; SET and RESET switch on and off selected pixels. The function POINT is used to determine which state a pixel is in. There are no commands to draw lines and circles which are standard on most of the other micros offering high resolution.

The Laser 200 produces limited sound effects through an internal speaker using just one command, SOUND. With this command, only the pitch (the range is 2.5 octaves) and duration of a note can be set. As with the Spectrum, there is no separate sound chip, so there is a pause in the program operation when sound is used.

Programs may be saved on a standard domestic cassette player. For cassette handling, commands CLOAD, CSAVE, and VERIFY are available. CRUN allows programs to auto-run on loading. The

Above: This view of the main printed circuit board shows how little internal structure is necessary in a modern microcomputer.

demonstration tape proved to be troublesome to load but I experienced no problems when loading and saving my own programs. There are two commands to save and load data, PRINT and INPUT, but these are very restrictive and not really suitable for database applications.

Worthy of a mention are the useful formatting commands in mode 0 (text mode). PRINT@ and PRINT USING can be combined to give easier screen layout of data than the more powerful £100 micros.

Miniscule Memory

The Laser 200 is supplied with a minute 4K of RAM. The system grabs a big share of this, and only 1.25K is available for user programs and data. Therefore, if you wish to write or use programs of any substance, the 16K RAM pack for the Laser 200 is a must. This will give you 20K total RAM, 17.25K user RAM, but adds £29.95 to the cost of the computer. Much of the software available for the Laser 200 will need this extra RAM for operation. If even more memory is required, a 64K RAM pack should soon be available.

How It Compares

If you are an absolute beginner to micros and want a modest but reliable computer to try then the Laser 200 might be worth a consideration. However, the more powerful Oric, Spectrum and Aquarius computers cost, at the time of writing, about the same as the Laser 200 plus its 16K RAM pack,

and offer better expansion capabilities. So if you are tempted by the low price of the Laser 200 you must be prepared to trade it in if your interest in micros develops to outstrip the limited capabilities of this computer. I doubt if the Laser 200 will be of much interest to the more experienced micro user. It should not be forgotten that the Laser 200 first appeared on the UK market as the Texet, early in 1983. That computer was caught out by falling prices. The Laser 200 might suffer from the same fate.

The Laser 200 is distributed by **Computers For All, Southfields Industrial Park, 30 Hornsby Square, Laindon, Essex: Tel 0268 418414.**

Below: The 16K RAM pack.

If you wish a personal reply, please enclose a stamped addressed envelope and the reply coupon from this page. This is to enable us to give priority to regular readers of PCT.

Dear PCT

I have recently purchased a VIC 20 computer with which I am very pleased. However, it lacks a BEEP command facility and I wondered if there was a program which I can use with the VIC 20 to give me this facility.

Yours faithfully,

J C Mallinson

York

The VIC has very good sound and the scope given by the machine is far greater than that by the Spectrum's BEEP command. However, it is far more difficult to use sound on the VIC. If you read the chapter on programming sound in the VIC 20 User Manual or in the Programmer's Reference Guide and follow the examples you will find out how to obtain a 'beep' by POKING.

Dear PCT

I am a complete beginner to computers, having acquired a Spectrum very recently. I found the October edition of PCT very interesting indeed, but should be grateful if you could give me explicit instructions for using the free 'Shape Maker'. I am also having problems in transferring software, bought commercially onto blank cassettes for back up. In the past I have encountered no problems with audio tapes. What is the reason here?

I shall be most grateful for all the help and assistance you are able to give me.

Yours faithfully,

S. Smith

London

Taking your last point first I can't understand why you are having problems but you must bear in mind that audio copies are made at a lower volume than computer programs. If the signal going in is as strong as that coming out (usually well into the red at + 3 or + 5 decibels), then you should be able to get a copy. Remember that, except for backup copies for personal use, it is illegal to make copies under the copyright protection Acts.

Use of the shape maker requires a knowledge of user-defined graphics. The best book for you to look at is probably your own Spectrum handbook or 'Better Programming for your Spectrum and ZX81' by S.R. Speed. Basically the computer gets its characters from ROM, each one being a grid of 8 x 8 dots. One can tell the computer to get its information from ROM and by setting up these 64 points define your own shape. The shape maker helps you to convert from the binary

bit pattern of the shape to the number needed to POKE into the computer's memory. You will need eight numbers (one for each row) for each character.

Dear PCT

Would it be possible for you to tell me whether or not the teletext adaptor of the BBC Micro is necessary to receive teletext, or whether one can use a T.V. set already having the teletext facility?

Could you also tell me if there is a chess program which uses a light pen available for the BBC Model B.

Yours faithfully,

Adam Tanner

Cheadle Hulme

To use the teletext system on the BBC micro you must have the teletext adaptor, OS 1.0 or OS 1.2, the TFS ROM and a strong television signal. The signal goes into the teletext adaptor where it is decoded and the information required by the computer is sent down the 1 MHz bus. The teletext adaptor also understands commands from the computer such as "change channel". It would not be possible to adapt a teletext T.V. receiver to do this and would possibly be dangerous to try. The BBC adaptor is specially built for use with the computer. If you were to use a teletext T.V. with your BBC the teletext information and decoder are of no use to the computer.

I do not know of a chess program for use with a light pen. Issue 2 of Model B Computing, which is a tape based magazine, will have an excellent Towers of Hanoi for use with a light pen.

Dear PCT

May I benefit from your experience of micros and as it were think aloud, and seek your comments on my thinking.

I am interested in purchasing a micro with the following uses in mind — keeping records of a congregation of some 400 people, learning programming, and some games facility. Also in the future I would like to add a printer and a limited facility wordprocessor (for my work a 40 character line would not be too much of a problem). I have scanned many articles and magazines and have formed the opinion that the Commodore 64 would be a reasonable purchase, especially as the price has dropped recently. It seems to have an adequate memory and a solid keyboard. Looking to the future its printers and discs seem to be available at reasonable cost. For the moment I would be using a black and white portable T.V. for display. Would you agree with this thinking, or would you suggest an alternative? Are the Commodores reliable?

Also I know the IBM 64 requires its own cassette deck. I run a large Ferrograph reel-to-reel deck with full remote control facilities, and would like on occasions to use this for information storage, is that possible using an appropriate interface?

Yours sincerely,
Rev. Derek Corner
Greenock

Editor's Reply: Although, we do not usually enter into correspondence about decisions to buy a specific machine in this case it would seem to me that you have already made up your mind up on the matter of getting a Commodore 64. I would agree with you that it is a microprocessor capable of dealing with the work you have in mind for it. However, in the long run I think you will find the need to buy a colour T.V. receiver or monitor to make use of the excellent colour graphics of the machine.

With regards the tape facilities. You are right in thinking that the Commodore 64 requires its own Commodore cassette recorder and in the long run, such dedicated recorders are by far the best system. However, should you still wish to use your reel to reel you will need to interface it with the micro. We don't know of any interface that are made commercially for this purpose, but you may be able to have one specially made by a company who make them to interface with the Commodore 64 and with other cassette recorders for owners who wish to upgrade their recording facilities.

Dear PCT

I have recorded a program that draws different coloured designs on the screen with a joystick for use with a VIC 20. Is there a method of saving these designs on tape?

Yes, there is a way of saving these designs. You will need to write a program which reads the screen memory and writes a data file. One possible one is:

```
DIM SM (number of points on the screen)
FOR C= SCREEN START TO SCREEN END
SM (C- SCREEN START )=PEEK (C)
NEXT
OPEN 1,1,1, "SCREEN"
FOR D=0 TO (number of points on the screen)
PRINT 1, SM (D)
NEXT
CLOSE 1
which will save the screen. You will then need a similar program to read the saved data back.
```

Dear PCT

I recently purchased the October edition of your publication, Personal Computing Today, with the PCT Shape Maker on the front cover.

I can now design my own characters, but I don't know exactly how to initialise the keys with the new character. I know that for the VIC 20, the POKE 56,28 and the POKE 52,28 commands must be used, but that is all I know.

Yours sincerely,
R.F. Zeeuw
Holland

On Power Up, the VIC takes its character set from ROM. To use user definable characters you must tell the VIC chip to look at RAM and then it is best to copy the character set from ROM into this area of RAM. You can then change the characters by poking into this area. I would recommend the VIC Programmers' Reference Guide for a more detailed explanation of how to do this.

— Corrections —

PINK PANTHER needs an extra line adding to the listing: Line 5 eS = ""

OXO: Line 20070 of this listing was incomplete. It should read:

IF S = 241 THEN FOR S = 241 TO 130 STEP - 2.

Clearer listings of this program by Stephen Meredith can be obtained by writing to the editorial department at the address given inside the front cover.

GAMES

SOFTWARE REVIEWS

Each month PCT will be presenting pages of reviews of the computer programs currently available. We have engaged a team of reviewers, each of whom is a seasoned user of his/her particular machine — and has the crazy streak that means they enjoy playing computer games!

All types of software will, however, be reviewed in these pages; but with around 85% of all home-computer software being of the playful variety, you will be seeing more games than anything else!

Our 'Ratings Table' headings are:

Program Quality

Here we're looking to see how well written the program is, and how well it exploits the computer's capabilities. Also, how logical is the structure of the program? Does it require the user to make guesses to use it?

Crashproofing

We all hit the wrong key sometimes,

do we not? Go on, admit it. If the program has been well written, all should not be lost. If, for example, the machine is asking you to enter "Yes" or "No", then any other key except Y or N should illicit no response whatsoever. In other words, how tolerant is the program of us humans?

Value For Money

Quite frankly, some software on sale today is vastly overpriced. With the low cost of cassette tapes, why *should* simple games cost up to £12 per tape? We judge this one on an overall basis — how much work have the suppliers put into the program and is the price reasonable?

Presentation On-screen

How good are the graphics used in the program? If the instructions are provided on screen, are they both readable and easy to understand? This section examines the

visual aspects of the package — vital for games!

Ease Of Use

If the program is for, say, an 'action' game, then the author's choice of keys is very important. Try playing "Invaders" with the movement keys reversed, and the "Fire" button right next to 'Reset'! There are many, many ways in which life can be made easy for the program user. We want to see them *all* used!

Supplied Instructions

Regardless of whether the instructions come on sheets of paper, or are presented as text on-screen, they should be as clear and as concise as possible.

Ratings are done on a "Five stars is excellent, one is hopeless" basis, with the reviewer then scoring the supplied package as a whole on a percentage scale.

Delve into or Software collection and choose your next entertainment

Title: The Ultra
Type: Tape
Supplier: P.S.S.
Machine: Oric-1 48K
Price: £6.95

If you want a fast 'n furious, colourful arcade game, then buy the Ultra — it's fantastic. There are 16 waves of grotty aliens which are apparently forms of 'an evil race of mutants' to quote the cassette insert and which you have to zap with your laser base.

Playing without the handy pause button proved difficult — I could only scratch through eight waves without it! The bonus points are gained when the 16 waves have been cleared — a congratulatory remark is displayed and then you start again at the first wave but with the aliens

moving even faster and in different colours.

Movement is smooth but sound isn't used very imaginatively. Other features worth a mention are: Hall of Fame, three sound levels, pause key, heat level indicator — important as you will soon learn!!

It is hard to fault this game, but joystick control or keyboard control re-figuration would be nice, and sound could be improved. Overall though the game is excellent and very addictive.

D.T.W.

SOFTWARE REVIEWS

Title: Spacefighter
Pilot Missile Man
Type: Tape
Supplier: Jupiter Cantab
Machine: Ace 3K
Price: £5.95

These two programs on one cassette are fine examples of what can be done using a mixture of FORTH and machine code in less than 3K of RAM. Spacefighter Pilot provides an excellent simulation of taking off from a runway into a changing pattern of nocturnal stars and the illusion of motion is produced and sustained by moving lines. There are two "warp speeds", fast and very fast, and a running score of missiles zapped and missiles which got through is maintained in large figures at the bottom of the screen, against the usual whooping background of what the arcade addict has come to think of as space noises.

There is an instruction "SH — Silent" on screen, but no way could I find of activating it. You can change the warp speed and zero and counters in mid-game, but the only way to escape is to cut off the power. This disabling of controls is presumably a protection against copying, but it unfortunately also prevents the user studying the skillful programming. The instructions are terse to the point of inadequacy, but most users will sort them out by trial and error, although they should not have to.

Missile Man is a clever if relatively basic interpretation of an old arcade friend without the protective forts at the bottom of the screen down which the "hoards" (sic) of space invaders slide diagonally while the bombs fall vertically, which adds an element of new interest. The playing area only occupies about half the screen and the score is kept to the right of this. Movement is on the slow side and somewhat jerky, but not unacceptably so, for this is FORTH without benefit of machine code. The player's single gun moves and fires in the usual way.

The program is protected and use of the "V" key to start the game prevents the user examining the dictionary with VLIST. There should be some recognition of the fact that many users want more than just the run-time effects of the program they buy. **G.M.**

Title: British
Lowland
Type: Tape
Supplier: Cases
Computer Simulations
Machine: 48K Spectrum
Price: £6.00

British Lowland is an all text simulation of a small sports car company. My initial impression of such simulations is one of doubt. The structure of these games is such that even a novice user will soon be writing his own, and I think this is borne out by the number of these programs being published in magazines. Because of their structure the games they are more suited to BASIC than to machine code. BASIC allows very complex structures and can produce very good renderings of simulatory games.

Well, to the game. You start with being asked your skill level. Four levels provide a fairly balanced challenge. A few nice tunes complement the text, including a little rendering of 'We'll keep the red flag flying here' whenever the unions are active (accompanied by a red screen!).

Every month you are provided with an account and a bank balance. You may choose between four options of action including manipulation of prices and numbers of production lines. Occasionally you are given the chance to launch new models or upgrade your existing ones. Adversities such as strikes and accidents keep you on your economic toes. Union requests include shorter weeks and larger wages, which, if ignored, are usually followed by strikes.

I showed the game to a few of my friends who are A-level economic students and the response was enthusiastic. All in all, a fairly good game if you like this sort of thing. A mite overpriced though. **P.C.**

Title: The Frogger
Type: Tape
Supplier: Microdeal
Machine: Dragon 32
Price: £8.00

Once upon a time there was a frog who appeared to have an irresistible urge to commit suicide — or that is what playing The Frogger will have you believe.

The purpose of the game as we all know is to manoeuvre this frog and his family across a busy main highway — a sort of quadruple contraflow for those more used to negotiating Britain's motorways. Traffic of various sizes and speeds travelling in each direction. Having successfully negotiated this obstacle the poor old frog has to try and cross a river by jumping on the backs of turtles who have a habit of diving at the wrong time, logs which travel at varying speeds and avoiding the wicked serpent who's looking for a meal. Success is achieved when he get into his home on the river bank providing no-one has put a gate across it.

At first you have four frogs to get across, once you have filled up the five spaces on the far side the action speeds up, more vehicles on the road and less 'stepping points' on the river. The action continues

until all your frogs have either been run over or drowned — although I always thought frogs could swim!

The entire game is accompanied by increasingly frenetic music and scores are displayed at the top of the screen, but it's a pity that the facility to save a score isn't there. The player(s) has the option of Joystick or Keyboard.

The program is presently the top selling game in the US and with this version's good graphics and smooth action I think it could very well find itself in the same position here. **D.W.**

Title: Pinball Wizard
Type: Tape
Supplier: Terminal Software
Machine: VIC 20 (unexpanded)
Price: £7.95

Having seen quite a lot of VIC software, I was rather sceptical of the claims on the packaging. However, once the game is loaded seeing is believing.

Your display shows a pin table, complete with bumpers, rollovers, flippers and score display. The game can be played by one or two players which adds to the competitive spirit. Function key F1 selects one player; F3 two players. Function key F5 pulls the plunder back to varying degrees, and F7 releases the ball.

Now the fun begins. The ball moves with flicker-free precision around the table, bouncing off side walls and bumpers with accuracy close to the laws of reflection. The only key to press now is the Commodore logo key, which activates the flippers. These act as on a real table and must be hit at the precise time to effect the desired result.

I almost forgot to mention one very important key, the space bar. As every good pinball player knows, a quick shove of the table can gain a new high score, just so in this game.

A press of the space bar give the ball that extra bounce off the side wall to stop it going down the gap between the flippers.

WARNING: Do not press the space bar too often or a TILT results and one ball's lost.

If you are tired of the run of the mill, "BLAST the alien" type game, then this game is for you. The excellent use of sound, HI-RES graphics and colour make this game worthy of any software collection.

Title: Matrix
Type: Tape
Supplier: Llamasoft
Machine: Commodore 64
Price: £7.50

Matrix is an excellent follow-on from Gridrunner by the same company. In this game the fighter has greater manoeuvrability and firepower due to a very well-written machine code program but this is counteracted by very vicious droids who will do anything to kill you.

The game is quite straight forward until level four (of 20) when 'cameloids' will descend onto you. To actually score some points is very hard. There are various things to use and beware, the deflectors and the zappers are but two of these. The dreaded 'snitch' is really bad, being a humanoid who decided the pay was better on the other side!!

The game can be broken out of by resetting the machine. The graphics alone warrant the price of the cassette and the sound is the best my 64 has produced. There are more than enough instructions supplied and a brief history of the game is included.

Definitely one of the best games I have ever played on the CBM64!

Title: One Hundred and Eighty
Type: Tape
Supplier: A & F Software
Machine: BBC A & B
Price: £8.00

This game of darts is for two players and loads in two parts. The first is an instruction section using coloured Mode 7 text, which I found incredibly clear and accurate. It describes the four variations featured on the tape; Shanghai, Noughts and Crosses, Round the Clock and of course, the normal game of darts.

When the game has loaded automatically, it starts by giving the players a set of choices. First it asks for the names of two players. Then it asks which of the four variations of play is required. Once the variation has been chosen, more questions determine the skill

SOFTWARE REVIEWS

level desired and the length of the game. Once all these questions have been answered, the screen design is drawn which takes some time, since the program is written in BASIC.

A perfect darts board is drawn in the centre of the screen. A window shows the flight path of the dart (which one controls using the UP and DOWN keys) and two more windows on either side show the players' names and a picture of a man sitting in a chair who stands up when it is his turn.

To position the darts, one uses a system of crosses parallel to each other; one above and one below the board. I found these very unsettling on the first level so one can imagine how bad they were by the fifth, causing immense problems with regards accuracy.

My only other criticism of this game is the sound quality. There is a pathetic "thud" when the dart hits the board and when a player wins the game, there is a whining which sounds like a cat being strangled!! Apart from the keys used to control and launch a dart, the ESCAPE key resets the game and the BREAK key has its normal function.

Overall, I found this game fun to play and think it will entertain people of all ages. **G.J.B.**

Title:	Plunder
Type:	Tape
Supplier:	Cases
	Computer Simulations
Machine:	Spectrum/48K
Price:	£6.00

This latest release from Cases Computer Simulations puts you as Captain of a ship in the year 1587. The idea of the game is to prevent the Spanish ships from transporting gold across the Atlantic from America to Spain. Failure to do so will enable the Spanish to build their Armada and sail against England leaving your dreaded rival, Sir Francis Drake to save the day.

There are nine levels of play with each level requiring more gold to be stopped before completion. Full instructions are given on the insert and are repeated upon loading if required. A high resolution map of the Atlantic is then displayed showing your ship flashing on a grid. Movement is achieved by the cursor keys for north, south, east, and west, with the first four number keys giving diagonal movement. Occasionally after a move, or turn, your lookout will report a ship of some nature. You are then asked whether to attack or not and if you do, whether to fire or board.

After a few encounters your crew, weapons, and damage points will become depleted and need restocking which is achieved at one of the ports marked in red. A minor criticism here is the jerky movement of the screen during docking which is rather confusing. However, after docking has been accomplished a menu is shown, which contains the prices of men and cannons etc, as well as the market option. The market also shows various goods and their prices eg, jewels, grain, opium, etc, these can be brought at one port and sold at another, sometimes for a profit. Of course you will need gold for all of these goods, so try not to sink too many ships. So the game continues with a series of battles, retreats, and repairs until you run out of turns, are sunk, or manage to stop enough gold.

All in all a pretty good game, but I cannot imagine wanting to play it too often. **G.W.**

Title:	Cosmic Zap
Type:	Tape
Supplier:	Microdeal
Machine:	Dragon 32
Price:	£8.00

Cosmic Zap is a space invader type game for the Dragon 32. You have to kill aliens and protect yourself from their attack. All you have to protect your base is a laser cannon, which has the annoying tendency of overheating.

The aliens attack from only four positions on the edge of the screen. They then start firing bullets, so you have to blast the bullets and then hopefully blow up the attacking ship. This continues until you have killed the numbers of aliens required on that level (about 15 on level 0, and about 30 on level 15). Constant fire is not allowed as it heats up your laser cannon and if the cannon reaches a certain temperature it melts down and you lose one of your three shields. Also if a bullet hits you you lose a shield.

After you have killed the required number of aliens you meet the Death Satellites, which have to be shot as soon as possible as they soon leave their orbit and come in to collide with you. After the Death Satellites (normal aliens) return. Every 10,000 points you score you get an extra shield and you increase two levels.

The display constantly informs you of gun temperature, shields remaining, and the number of aliens needed to be killed before you meet the Death Satellites again. The graphics and sound were excellent and the differences in levels was good. Not exciting enough to play for hours but it is nice to go back to for a quick game on one of the higher levels. **S.F.**

for the BBC B
& Sinclair ZX Spectrum

LONGMAN SOFTWARE -THE KEY TO EARLY LEARNING AND FAMILY FUN

When we launched our early learning software you were delighted. At last programs were available from Britain's top educational publisher that let you use your home computer to help your children learn important basic skills. Now we've added eight exciting new games that cover an even wider range. Early learning is easy as children join in the fun with the Robot Runner, Sum Scruncher, Micro Chimp and lots more colour graphics.

PLUS

an exciting new range of word game programs for players of all ages that will let your whole family make the most of your home computer. Shoot down letters, spot the anagrams, or build your own pyramid of words in games that are checked by the computer's built-in dictionary.

Letter learning for
4-6 years £7.95

COMPUSOUND TELESOUND 84

"THE ONLY ONE OF ITS KIND TO
FIT INSIDE THE SPECTRUM"

Probably the worlds smallest modulator!

TELESOUND 84 is ready built and tested to get full Spectrum sound through your unmodified television set, black/white or colour. The unit can be fitted in minutes without any previous experience. Telesound 84 has been developed using the very latest ultra miniature components so that the size is kept to an absolute minimum.

TELESOUND 84 FEATURES

- Sound and vision together for added realism • Beep volume controllable from a whisper to a roar • Keyboard prompt click clearly heard to assist program entry • Programs can be heard when loaded • Compatible with all other ZX add ons including micro drive • No soldering or case cutting required • Additional amplifier not necessary • Separate power supply not required

TELESOUND 84 comes complete with a free sound effects program and costs **£9.95** inclusive of post, packing etc. Please state your computer when ordering.

SOFTWARE

SNOW DROP

To neatly round off this January 'Christmas' edition, we've included this well-thought out game program by David Holmes.

This is a pleasant seasonal program for the unexpanded Texas TI-99/4A machine. The object of the game is to 'freeze' letters falling from the top of the screen if they are not present in the word shown at the bottom. For every letter that reaches the bottom of the screen, a point is lost.

The longer the word, the harder the game as the snowflakes holding the letters begin to thaw! Blocking a falling letter is simply a

matter of hitting the corresponding key.

SPECIAL FEATURE

The computer responds in respect to the speed that the game is played. Play fast and the game will RUN — play slow to acquire a little thinking time.

This is achieved by the variable R in lines 170,980,1210 & 1230.

HOW IT RUNS

Lines 100-160 Zero variables.
Line 170 Search area row co-ordinate.
Lines 180-210 Reads data.
Lines 220-330 Screen colour & initialisation.
Lines 340-600 Selects, shuffles & displays word.
Lines 610-910 Main program, starts moving display & calls sub-routine.
Lines 920-1040 Search for letter.
Lines 1050-1390 Moves letter down & across screen. Checks for

error.

Lines 1400-1460 Game over sound routine.
Lines 1470-1540 New game routine.
Lines 1550-1770 On error returns letter to top of display.
Lines 1780-1830 Updates error count.
Lines 1840-2300 Title sequence.
Lines 2310-2510 Prints instructions.
Lines 2520-2610 Changes screen colour during game.
Lines 2620-2680 To "print at" in TI BASIC

HINTS ON CONVERSION

All TI Basic Graphic and Sound commands are pre-fixed
"CALL" HCHAR or (A,B,C,D) A = row; B = column; C = ASC;
D = repeats (if more than 1) VCHAR.
SCREEN(A) A = one of 16 colour codes.
COLOR(A,B,C) A = colour group; B = Foreground colour;
C = Background colour.

GCHAR(A,B,C) A = row, B = column; C = ASC (Peeks at screen co-ordinates).
SOUND(A,B,C) A = duration; B = frequency; C = volume (0 = loudest).
KEY(A,B,C) A = TI keyboard format; B = ASC of key pressed; C = Logical Control.

AT LAST, A HOME COMPUTER THAT IMPROVES WITH AGE.

It's surprising how many first-time relationships with a home computer go sour with age.

You buy an attractive, discounted little machine so that you and the children can learn about computers.

Instead, you learn about its limitations: the dull graphics. The plugs that fall out. The cheap power supply. The unalterable "beginners" language. The stiff, fragile keys. No provision for future developments. If only you'd looked around a bit in the beginning... *"Quality costs a little more, but it's usually worth paying for"* (Personal Computer News - CGL M5 Review, June '83.)

The CGL M5 is designed and built by Sord, one of Japan's leading computer specialists, with three main ideas in mind.

First, to be easy and fun to learn and operate.

Second, to be rugged enough to last through hours and hours of operation.

And third, to form the basis of a powerful, versatile home computer system that won't need replacing until you're ready for a dedicated business system.

Built to learn

The CGL M5 is designed to be easy for non-geniuses to use.

"On the M5, most of the work is done for you, and all that is left is the need to work out what to do next, rather than how to do it." (Personal Computer News, June '83.)

If you make a mistake, you can correct it with a simple movement of the cursor. So you only correct that mistake, not a whole line; nor do you have to indulge in complex edit commands.

Budding video game designers and computer artists will love to get their hands on the 16 colour graphics and 32 moveable images called "sprites."

"The M5 makes professional graphic

effects very simple for even the beginner to achieve." (Personal Computer World, Aug. '83.)

Built to last

"It works first time, doesn't need a lot of mollycoddling and jiggery-pokery to persuade it to continue to do so, and what's even better, it continues to work well. You don't have to balance cold cartons of milk on the top, shove matches in the back to keep the plugs in, or press the keys with several pounds force to make them respond." (Personal Computer News, June '83.)

Being able to build things that work and carry on working without endless maintenance is something at which the Japanese seem to excel.

Built to grow

To be truly versatile, a home computer has to understand very different things.

So you need different "languages," which the M5 provides by supplying part of its memory in plug-in cartridges.

"The M5 eliminates the worst limitations on machines at this level, which is that they tend to be stuck with whatever language is provided by the management." (Personal Computer News, June '83.)

The computer is supplied complete with a Basic-I cartridge, a standard integer BASIC language and a simple learning text.

Plug in the Basic-G cartridge, and you can access the M5's incredibly sophisticated graphic and sound capabilities which are far in advance of similarly-priced computers.

Move on to the Basic-F cartridge, and you have scientific, technological and statistical computing power usually available only

on big computers with equally big price tags.

The FALC cartridge provides a tailor-made language for data management, spreadsheet accounts and business problems. Combine FALC with a disc and you could *"turn the M5 into a small business machine"*. (Personal Computer Magazine, August '83.)

Now, take a look at the back of the M5.

Notice the sockets (usually an extra) for a standard

Centronics-type printer, the separate video monitor and hi-fi sound output.

Even the language cartridge socket has hidden potential:

"Unlike most such sockets, this one has 56 internal lines connected to it giving access to just about every function in the computer. This means that just about everything you can think of can be added onto the computer, ranging from a Prestel interface to second processor to use as an intelligent terminal on a timesharing computer..." (Electronics - The Maplin Magazine, March '83.)

Take a look at the home computer that will improve with age.

For a full technical specification of the CGL M5, details of the wide range of supporting software and to find out where to see a complete demonstration, send the coupon to:
CGL, CGL House, Goldings Hill, Loughton, Essex IG10 2RR. Telephone number: 01-508 5600.

I'd like to know more about the CGL M5. Please send me a brochure and a list of dealers.

Nothing extra to pay. All prices are inclusive. UK prices are shown first and include post and VAT. The second price in brackets is for export customers in Europe and includes insured air mail postage. The third price is for export customers outside Europe (include Australia etc) and includes insured airmail postage. Official orders welcome.

STAR SOCCER

The ACTION game with the thrills of real football

Choose your team formations from 3-2-5, 4-2-4, or -4-4-2.

When the game starts it's up to you to plan your moves and outwit your opponents. See the results played out by fast machine code routines on a birds-eye view of the pitch.

Make the split second decisions that the professionals have to!

Shall I make the short safe pass and maybe let the defence re-group?
Or do I try a long defence-splitting ball and risk an interception?
Has my winger got the speed to take on the full back and beat him?
Do I try a long shot and catch the goalie off his line?
Or shall I give the ball to a team-mate in a better position?

The more games of "Star Soccer" that you play, the more skillful you will become. You'll learn how to set up the goal-scoring opportunities, and how to get yourself out of tight corners. You'll develop your own style of play and find out which formation suits you best.

Side 1 features a SUPER LEAGUE competition between 8 top British sides. Aberdeen, Aston Villa, Celtic, Liverpool, Manchester United, Rangers, Spurs and West Ham. 28 games in all and the League Table is automatically maintained for you.

Side 2 replays the WORLD CUP finals. It's a knock-out competition between England, Scotland, N. Ireland, Italy, West Germany, France, Brazil and Argentina. Lots of excitement with sudden-death extra time in drawn games.

It's amazing how so much is packed into 16K!

Available for ZX Spectrum and ZX81

**MICRO POWER - PUT TO THE
TEST WE'LL PASS WITH HONOURS!**

ADD ONS

The New Year promises to be bountiful in terms of interesting and useful peripherals.

MICRO TALKER

Manufacturer: R.P.S. Electronics

Price: £59.16 all inclusive

This speech synthesiser is intended for use with the BBC Microcomputer and plugs directly into the user port on the front underside of the machine. Explicit instructions accompany the hardware and ensure that safely setting up the Micro Talker should prove no problem.

The Micro Talker unit has one other connection port, a standard five pin DIN (much more useful than some of the jack connections on its rivals). This enables the unit to be linked to the amplifier in your hi-fi system or wherever, so that you can broadcast electronic speech to your neighbours.

There are three main methods of creating computerised speech currently available. Digitised speech is what you get when you buy Kenneth Kendall's voice in ROM. Linear Predictive Coding is a complex mathematical method which also involves prerecording and storing a set of words. Micro Talker uses neither of these means, but the third method, which is generally preferred by manufacturers at this end of the market: allophone synthesis.

Allophones are the basic sounds of human speech and they can be combined to form words. The hardware that goes to make up Microtalker is an electronic model of the human vocal tract. It is up to the programmer (you, the user) to put the words into its mouth.

The main advantages of this method are the low data rate (ideal for low memory micros) and the theoretically unlimited vocabulary. This of course depends on the stamina of the user and how good the supplied software is. This is

where Microtalker really scores. The documentation is comprehensive and includes advice on using the allophone set as well as listing the address table with sample words and duration for each sound. This table can be used in association with the R.P.S. Wordmaker program which assembles the allophones which you input (and it will accept X rated language so make sure your Mum is out of the house) and creates a dictionary.

A more advanced piece of software comes in the form of a Speaker program, which has a precompiled word table (which is fairly comprehensive if you are always talking about computers). This enables sentences and speeches (more stamina) to be entered using the supplied combination of pauses. The software is supplied on cassette.

The price given is for mail order direct from R.P.S. and includes postage and packing. The Micro Talker is now also available from shops. Further details from: **R.P.S. Electronics, Unit C200, Saltire Workshops, Ashley Lane, Shipley, Yorkshire, BD17 7SR. Tel: (0274) 588310.**

TAC 2 JOYSTICK

Manufacturer: Suncom, Consumer Electronics Ltd
Price: £18.95

TAC stands for 'Totally Accurate Controller' — there's confidence for you — and the product is being marketed as a superior joystick.

Unlike most of the high quality (by this I mean expensive on the whole) joysticks around, it has a very small throw. The product is solidly constructed with a chrome steel shaft topped with a small plastic ball. There is a square base with rounded edges and FIRE buttons for left and right handed play. Unlike the stick

control the FIRE buttons are not very sensitive and do not have sufficient spring. The extra sensitivity in the joystick shaft is achieved by replacing the more general leaf switches in the base of the shaft by squares of metal.

I found the joystick to be the best I've ever used with one small criticism and that is my dislike of the patterning around the base — something that doesn't detract from superior control and hence better scores!

The joystick is available from **Consumer Electronics Ltd, Princess Street, Fallowfield, Manchester M35 0HS** and leading computer retailers.

SINCLAIR ZX INTERFACE 2

Manufacturer: Sinclair Research
Price: £19.95

The ZX Interface 2 is one of the bundle of goodies recently released by the Sinclair Company. It allows a player to use two Atari-type joysticks and to run the new Sinclair plug in ROM cartridges, of which a range of

games and utilities are to be released soon.

The interface stimulates the number keys 1 to 5 for the first joystick and 6 to 0 for the second; the order being LEFT, RIGHT, DOWN, UP and FIRE. However the documentation recommends using IN61438 and IN61486 in preference to INKEY. Our review interface was generally well-constructed in all but the edge connectors; these will be improved in the production models. The plug in ROM cartridges are neat little packages, very small and protected by a layer of rubber which is pushed out of the way on connection. At £14.95 these cartridges are not cheap and demand may be limited but the titles are good and many more are promised including some programs not available on tape.

Because the plug-in ROM is separate from the computer's RAM, a game which requires 48K on tape will run on a 16K Spectrum with the interface 2. This may allow much more complicated programs to be written using all the 48K or the machine's RAM. The interface is a worthwhile add on giving scope for increasing the power of the Spectrum at a typically low Sinclair price. However, I feel that the ROM cartridges are expensive and this may be a factor restricting most of us from taking advantage of this neat package.

The interface is available from Sinclair dealers nationwide or telephone **0223 353204** for stockists.

ORIC COLOUR PRINTER/PLOTTER MCP40

Manufacturer: Oric Products International

Price: £169.95 (see also below)

The first of Oric's long promised peripherals are finally becoming available and it looks as if the Company is at last beginning to improve in terms of reliability of delivery.

The first peripheral to have reached production is the four colour

printer/plotter. The idea is not new, Tandy have had a similar machine on the market for years and other manufacturers are just beginning to realise its potential with Atari and Commodore bringing out similar models. The actual mechanism of the MCP40 is similar to that of the Sharp MZ700 machine.

Dashing Design

Externally, the plotter is very smart and finished in colours to match the Oric 1. An on/off switch is situated on the side (useful since the machine plugs directly into the mains) and buttons on the top control line feed, colour select and pen change. LEDs serve as POWER ON and PAPER END indicators. Connection to the Oric micro is by a narrow centronics parallel cable. The whole unit is neat and has a very professional and sophisticated look about it.

Feeding paper into the rollers is simplicity itself. Just present the straight edge of the paper to the roller, lift the lid above the pen drum and hold down the line feed button for the paper to feed in all by itself. It is necessary to lift the lid when switching on to prevent the self test from drawing on the roller. There are two self tests built into the MCP40, the first is triggered by switching on and draws four 1cm squares, one in each colour which is useful for getting the ink flowing in the pens. The other is a full printout of the character set and is triggered in the usual way by holding down line feed when switching on.

Being such a flexible gadget, the MCP 40 has a wide range of commands which are all sent from BASIC using LPRINT. These commands can be divided roughly into graphic and text commands and can be switched using LPRINT CHR\$ (17) to get into the text mode and LPRINT CHR\$ (18) for the graphic mode. The text command allows you to print in various size characters, in

four directions and in all four colours.

The graphic commands are much more powerful and give control over line type from solid lines to dots

with short and long dashes between. You can draw and move to absolute and relative positions over a width of 480 steps and to a depth of 999 steps. The only 'macro' command similar to those found on larger, more expensive plotters, is one to set up and draw the axis. The origin can be moved so that negative x coordinates can be used as well as negative y coordinates. Printing usually resets the head to the beginning of the line so that you have a print in graphic mode option which allows you to mix graphics and text more easily.

Flaws

Two flaws mar the overall brilliance of this product. The first is the unreliability of the cut down centronics port which results in spurious data being sent. This is not so bad in a listing job (you can always relist and get a correct listing for that section), but on a large complicated plot (such as a graphic design), one point out of place will spoil the whole pattern which may have taken ages to build up.

The second major fault is in the documentation. The plotter/printer is a complex product, probably being used by beginners to computing, who need to be taken step by step through the way it works. Examples would be a help. The 32 page Operation Manual skimps on detail, particularly on points of syntax where things can go wrong. There are no details on how to use variables which is something the MCP40 is very fussy about. LPRINT "D100,100" is valid, as is LPRINT "D100, 100" but A\$ =

"D100," + STR\$(100) is not valid — you have to strip leading spaces from concatenated strings. However, once this is realised, you can generate some wonderful patterns and a huge paper bill.

Conclusions

The MCP40 is a nice toy. It cannot be considered as an alternative to a dot matrix printer unless the print loads are light and the operator has a lot of patience. The print speed of 12 cps is very slow, but the print quality and the choice of 40 or 80 character width, along with its neatness make the MCP40 a very attractive buy. Oric are currently increasing its appeal by knocking £40 off the price when bought in conjunction with the 16K Oric 1 home computer by mail order from **Tansoft, Units 1&2, Techno Park, Newmarket Rd, Cambridge.**

• **COMPLETE PACKAGE**
• **FOR SPECTRUM**
• **OR BBC MICRO**

Add on the printer that adds up to less than £230

A Seikosha GP100A Printer. Plus the correct interface*, cable and software for either a Spectrum or BBC Micro. All at a price that adds up to just £229.95 inc. VAT.

For a superb combination of economy and reliability, this package is unbeatable.

Full graphics capability

The Seikosha GP100A uses standard width paper, and prints in an 80 column dot matrix format. Printing speed is 50 characters a second (180 x 7 dots/sec).

The GP100A comes with a full graphics capability.

Apply immediately

You can buy the Seikosha GP100A Printer at any of our dealers throughout the country. For the address of the one nearest you, phone this number without delay:

0934 419914

*Centronics parallel interface is supplied as standard, unless serial RS232 is required for use with Sinclair Microdrive. Please specify.

I am particularly interested in Spectrum ☐ BBC Micro ☐

Name _____

Address _____

Soon, English won't be the only common language of British school children.

Today a staggering 83% of all micro-computers being bought under the Government's Micros in Schools project, are BBC Micros.

This overwhelming vote for one machine is, naturally, very flattering to us. But it is also, coincidentally, very useful for everyone interested in the expansion of computer literacy in schools and beyond.

Because now most children are learning the same computer language – BBC Basic. And it goes without saying that a common language will help everyone move ahead that much faster.

It is of course no coincidence that the BBC Micro is being consistently chosen by schools (and by universities, scientific institutions and business). Nor that it has become one of the top selling computers for the home.

The magazine Which Micro put it rather succinctly in its February issue this year: "The BBC Micro (has) an unrivalled potential for business, educational and serious home applications."

It is, in effect, a home computer with the capacity to do a lot more than you'd expect from a home computer.

It can play games; it can help the children with their homework (there's a huge range of educational software available); it can help with everything from gardening to book keeping.

In fact, it has been called the ultimate

home help. But it's a home help with a degree in business administration.

It can, for example, become a word processor and even has the facility to link economically with other BBC Micro's for more sophisticated business use.

With suitable adaptors, it can turn your TV into a Teletext receiver. Programs can also be downloaded from Teletext and Miconet/Prestel transmissions.

Perhaps we can let the reviewer in Video World (Feb '83) have the last persuasive word:

"BBC Microcomputers are the limousines of home computers...

that would not disgrace the home of a professional."

The BBC Micro costs £399. It is simple to set up (virtually any TV set and cassette player is all you need) and simple to use.

It comes with a comprehensive, step-by-step User Guide which introduces the Micro and shows you how to construct useful programs of your own.

You will also receive a free "Welcome" cassette which contains 15 different programs to experiment with.

It is available from WH Smith Computer shops, Boots, John Lewis and local Acorn stockists.

If you would like to order one with your credit card or if you want the address of your nearest supplier, just phone 01-200 0200

anytime or 0933-79300 during office hours.

The BBC Microcomputer System.

OUT OF THIS WORLD...

Great ideas have never been alien to Puffin. And these stunning fantasy book and software packs are no exception! A truly exciting and original combination of story and computer programs from sci-fi to sorcery.

THE KORTH TRILOGY—£4.95 EACH

Dare you take on the awesome might of the Korth Empire? Your swashbuckling skills will need to be at their sharpest in this intergalactic fighting fantasy! Each adventure pack contains:

- *an illustrated science fiction adventure story plus...
- *a cassette with three specially created programs for your Spectrum (16K and 48K).

THE WARLOCK OF FIRETOP MOUNTAIN

Book and software pack —£6.95
Software tape only —£5.50

A maze of hideous complexity riddled with nasty surprises and fiendish traps lies between you and the Warlock's treasure and only the very skilled will survive!

Warlock pack contains:

- *Warlock of Firetop Mountain story book plus...
- *Cassette with specially created programs for your Spectrum (48K.)

...OR DOWN TO EARTH.

Recognising the limitations of the manufacturers' manuals, Penguin have devised a series of guides which clearly and concisely tell you how to 'Get the most from your home computer'.

GETTING THE MOST FROM...£5.95 EACH

Each book offers:

- *Teletype typeface for easy program identification
- *Large size for easy use
- *Chapters which take you from unpacking through graphics, sound and colour, to program design, fault diagnosis and fault correction.
- *4 page colour insert illustrating graphics
- *Special hints—a section on the things the manufacturers forgot to tell you!

THE PENGUIN PERSONAL COMPUTER COLLECTION

POWER MERGE

Run together a suite of your favourite programs and utilities with this short program by R. Meehan.

It is often convenient to run together two or more BASIC programs as a single program. This short listing enables you to carry out such 'merging'.

Merge Operation

The following procedure should be followed in order to chain program 'B' onto the end of program 'A':

- 1) Make sure you have copies of both programs on tape — if not, type them in and make copies now.
- 2) After a NEW command, either type in the above program or CLOAD it from tape, if you already have a copy. If you wish to make a tape copy to avoid having to retype the program each time you wish to use it, do so **now**.
- 3) RUN the program. A section of memory is set aside by line 10 to hold the machine code routines represented by the numbers of lines 40 and 50. Lines 20 and 30 store the code at the chosen memory locations.
- 4) Enter a NEW command. This will get rid of the BASIC program, but don't worry — the all-important machine code, which does all the work, is still safe in protected memory.
- 5) CLOAD program 'A'.
- 6) Type in EXEC 32749. If you now LIST, it will appear that program 'A' is no longer in memory. This is merely because the BASIC interpreter has been 'fooled' by our machine code program into believing that there is nothing there, so that it does not obliterate program 'A' when the next instruction (a CLOAD) is carried out.
- 7) CLOAD program 'B'.

- 8) RENUMber program 'B' so that its first line number is greater than the last line number in program 'A' (if you do not have a listing or program 'A' and forgot to make a note of the last line number before step six, play safe by renumbering from a high line number and with a low line increment e.g. RENUM 30000,1).
- 9) Type in EXEC 32760. This restores program 'A', and tags program 'B' onto the end. A LIST will show the new, combined program in its entirety, and you may now CSAVE, RUN, or whatever you wish. (A CSAVE of the new program at this stage is recommended, unless you wish to go through the whole process each time you need the combined program).

If you now wish to merge a third program with the two already combined, start again at step six, treating the program now in memory as program 'A', and that which you wish to add on, as program 'B'.

Note that each part of a combined program will take up no less memory than it did as a separate program, so you will quickly find yourself running out of memory if you try merging more than two programs (even merging two 12K programs is likely to give you an OM error when the new program is RUN).

HUGE

REWARD

OUT WITH A BANG

End your program on an interesting note with this simple routine by Jonathan Holden.

This machine code program for the Sinclair Spectrum (16 or 48K) is designed as a finishing touch to a BASIC game or other program. It provides a more interesting ending than the usual stagnant congratulatory message.

The screen is divided into eight bands of three lines each, using the eight colours available on the Spectrum. The value held in the attributes file are successively changed to alter the colour of each band in turn. The routine is called in at the end of a BASIC program by the command `RAND USR`

31000.

A machine code loader is given below with the machine code held in DATA statements. Pressing 'Y' when prompted causes a return to BASIC; pressing 'N' causes a system restart.

Notes On Use

Put lines 10 to 70 at the beginning of the program as in a loader program. Start your own program at line 100.

Instead of using an `INKEY$` at the end of the program when

asked continue Y or N, put `RAND USER 31000`. The screen will then flash and the message will appear from the machine code routine. If you then type 'N' the program will NEW; typing 'Y' will tell it to carry on.

Hints On Conversation

The program is not easily transferred to other machines as it uses the Spectrum ROM. It may be relocated in memory but all absolute 'jump' instructions must be recalculated.

Trade enquiries welcome. Trade distribution nationwide ring 061-834 4233 for details.

On one hand, the best all-round performance

Colour Genie is now one of the most successful home computers that you can buy.

Not just because of price.

But simply because more families are realising that a computer with less all-round performance than the 32K Colour Genie is a waste of money and not so rewarding.

After all, you cannot tell what will interest you most until you've tried everything computers can offer you.

Some others ask you to compare the technical facts. Well, to give them all a surprise we've published some of 32K Colour Genie's most important features.

But for the less technical, here are a few other important questions and answers.

WHY YOU CAN'T BUY A COLOUR GENIE AT THE CORNER SHOP

You see, ALL computers are more complex than they first appear.

So when you start computing, you do need a bit of help. A Saturday shop assistant is NOT the right person to go to.

To ensure that you obtain the answers to any doubts or questions you may have about computers, a list of the many Genie specialists appears below. But if you have any problem whatsoever, get in touch with us at Lowe Computers — we're here to help.

- | | |
|--|--|
| - Design efficiency, 95% of RAM is available for user memory | - Screen display, 25 rows of 40 characters |
| - 16K ROM with Microsoft Colour BASIC Extended | - 16 colours (8 full, plus 8 hints) |
| - Forth (optional) | - 80 commands plus more than 40 graphics, arithmetic and special functions |
| - 256 predefined characters with 128 more you can program yourself. A massive 256 can be displayed at any one time | - 8 octaves, independent on each of 3 separate sound channels with independent volume, duration and envelope on each channel |
| - Repeat operates on all 63 keys | - Full synthesised sound effects via separate T.V. or Hi-Fi output ports |
| - 4 function keys giving 8 user programmable statements | - Cartridge based software |
| - Full editing and tracing facilities for de-bugging | - Prestel/Viewdata modem. Software cartridge loaded for fast system access |
| - Screen resolution of 320 x 200 with text and graphics | - Floppy disc system |
| - Or 160 x 102 individually addressable pixels in 4 colours | - Superb digital joysticks, with numeric pads and two fire buttons. |

WHY OUR 32K CAN MEAN A LOT MORE THAN EVEN THE MOST RECENT COMPETITORS

It's easy to quote big memory numbers like 32K. In many other popular computers of that size, it is not so easy to use it all.

Even some of the newest models let you use little more than two thirds of the user memory. The other third is snatched away to drive the computer.

Colour Genie has the type of "drive" facility that you would expect to find on a computer costing around £400. It uses less than 5% of RAM - giving you as much as 30K for more exciting games and more useful applications.

WHY GOOD PICTURES CAN BE MORE COLOURFUL ON THE COLOUR GENIE

Many other computers offer several modes. These give high resolutions but at a cost.

On some, high resolution uses so much RAM that you get only 2 colours, and very little memory left to play with.

But Colour Genie has got other ideas to let you have the good quality picture effect of high resolution (320 x 200 for the technical). AND FULL COLOUR

THIS IS HOW IT WORKS.

Colour Genie lets you create as many as 128 different shapes that it tucks away in its memory, in addition to the 128 shapes it has permanently stored (you can see 64 of them on the keys in the photograph).

**On the other,
the lowest price in its class**

£168! (incl. VAT)

You can then use all 256 in any order to create a full picture "brick-by-brick", for any game or application you invent.

And you can colour each shape in any of the 16 colours and tints, each time you use it.

The pixel graphics mode allows line plotting and generation of solid shapes.

Check out our "PAINT" command, for remarkable colour computing.

YOU WANT WORDS AS WELL!

Sure - Colour Genie won't limit you on that! Text and graphics are fully mixable.

WHY YOU CAN PLAY AMAZING GAMES - AND AMAZING GRACE

Not only can you play - or make exciting games. You can do it very noisily too!

Colour Genie gives you three independently controlled separate channels (or 'voices') each with a full range of 8 octaves.

So you can compose pleasant music - or drive everyone out of the house!

WHY COLOUR GENIE IS A TOUCH HEAVIER THAN MOST OTHERS

Some computers are designed as a simple box, with several untidy add-on pieces. Not only do add-ons add to cost, but they can add to more niggling faults as well.

So Colour Genie contains all that's necessary to make it work including the power transformer.

It is also made of stronger materials than many others, to cope with the most boisterous of families.

But just in case you find a 10lb box a bit awkward to carry to the car, you'll find it has got a built-in carrying handle!

Just another touch of service with the compliments of Lowe Computers. The top name in home and hobbyist communication and computer systems.

Special offer worth at least £40

FREE suite of 7 programs.

2 games, 3 utility programs and 2 music demonstrators.

Extensive and rapidly expanding software library holding all the best games PLUS education, mystery, adventure, business and utility programs

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

It's easy to complain about advertisements.

The Advertising Standards Authority.
If an advertisement is wrong, we're here to put it right.

SHEEPDOG TRIALS

You all know the T.V. programme, now you can test your own skills against the sheep in this novel game by Richard Sheppard.

Sheepdog trials is a strategy/arcade game for the unexpanded VIC-20. You play the role of a sheepdog and your job is to round up between one and nine sheep into a pen in as short a time as possible. You control the dog with keys W,A,S and Z for moving up,left,right and down respectively. There is a

choice of up to nine skill levels which affect the number of sheep to be rounded up.

If the dog is between one and four spaces away from a sheep in both the horizontal and vertical planes, then the sheep will move away from the dog. Any further and the sheep will wander at random,

any closer and the sheep will panic.

When all the sheep are safely in the pen the time taken and the number of sheep rounded up will be displayed and the option for another try is given.

No User Defined Graphics are used in this program.

Variables Used

AA	Flag set if sheep is in position.
CO	Difference between character & colour POKES.
D	Dog's position.
DX,DY	Dog's x and y co-ordinates.
F	Flag set if all sheep are rounded up.
I,L,M,Q	Used in FOR-NEXT loops.
MV	Movement input.
PP	Screen position of centre of pen.
SC	Screen position of top left corner of field.
SK	Skill level/no. of sheep.
SX,SY	Sheep's x and y co-ordinates.
TIS	VIC's clock.
X,Y,X1,Y1	Sheep's temporary x and y co-ordinates.

HOW IT RUNS

Line 10	Sets up variables.
Line 30	Subroutine for a delay loop.
Line 40	Subroutine for footstep noise.
Lines 70-80	Open gate.
Lines 109-186	Sheep run into field.
Lines 190-192	Close gate.
Lines 220-280	Put pen in random position on screen.
Lines 300-350	Allow dog to have three moves.
Lines 410-560	Allows each sheep to have one move.
Lines 600-610	Pick a random direction for sheep to move when panicking and wandering.
Lines 700-750	End of game.
Lines 800-850	Make a noise if sheep is caught and checks for end of game.
Lines 851-891	Print the instructions.

HINTS ON CONVERSION

Conversion of this program is not recommended as it uses a lot of POKES and cursor controls for the VIC. However, here are some hints if you do want to:

The top-left corner of the screen on the VIC is 7680 and this increases by 22 for each line down.

197 & 198 are the keyboard buffer.

36874-36878 are the sound and volume.

36879 is the screen and border colours.

TIS is the VIC's internal clock.

READY.

ORIC — SOFT

ORIC-1 Arcade Action

GALACTIC DEFENDER

Only you remain between the alien swarm and complete domination of the Universe. You can't hope to win (!) but you might make a posthumous entry into the Hall of Fame! (M/C — Full colour and sound — practice games).

TOADY Kamikaze Amphibian — dying to get home. Super M/C graphics — Hi-score — Menu driven.

ANACONDA The largest snake . . . yet to survive! (Hi-score — information — Hall of Fame).

Family Games

MASTERMYNDE (Oh No . . . Not Again!) Oh Yes . . . but this time a super deluxe version with timer, 9 levels of difficulty, sound, scoreboard etc., as reviewed in 'Weeklies'.

CLICK Addictive dice game, but needs excessive amount of skill and judgement . . . great for parties (up to 8 players) . . . sure to sort the 'men' out from the 'boys'!!

All tapes are **£4.95** each. SAE for full list. PO/Cheques should be made payable to:

Headfield Technology Ltd.,
Lock Street, Savile Town,
Dewsbury, West Yorkshire.

A NEW WAY TO LEARN PROGRAMMING FOR B.B.C. MICRO USERS

This series of easy-to-follow, carefully planned video training cassettes, specially produced for home video, help you MASTER your B.B.C. MICRO.

The skill of computer programming is not one that is easily learned by studying manuals. These video tapes bring your own personal tutor, David Redcliff, who has been involved in the training of programmers for the past 12 years into your home or school. He explains and demonstrates in an easy to understand way how to write your own programs and use your computer to its full potential.

Each video tape runs for approximately one hour and contains two or more programs which can be loaded onto your computer.

MASTER CLASS-COMPUTERS ON VIDEO

An exciting combination of 80's technology.

Starting to Learn Basic with the B.B.C. Micro. An introduction to the skill of computer programming to help you to understand the principles of Basic and write your own programs.

Further Basic with the B.B.C. MICRO. Continuing the teaching of the skills of programming.

The B.B.C. MICRO in Primary Education. This tape demonstrates some of the uses to which the B.B.C. MICRO can be put in the classroom and how the teacher can expand the scope of programs and evaluate their worth.

£19.95 each including VAT. FREE P&P.

Please send me VHS/BETA tapes (delete as applicable)

Starting Basic with the B.B.C. MICRO

Further Basic with the B.B.C. MICRO

I enclose a cheque/PO for £. p made payable to LASERBUG.

Please send the form to LASERBUG Dept. C, 10 Dawley Ride, Colnbrook, Slough, Berks., SL3 0QH.

CALLING ALL VIC-20 OWNERS

**WE WANT YOUR NAME ON OUR MAILING LIST
SO FOR JUST £3.00 WE WILL SEND YOU:**

1. A superb machine language 'KONG' Vic-20 Type Game that runs on any Vic-20 even unexpanded but which is so sophisticated you'll be amazed how we crammed it all into 3.5K. (This is one of our top Games Programs as we want to take this opportunity to prove to you how good our programs are).

NORMAL VALUE £7.95

2. A voucher for £4.00 off your next purchase from us.

3. Our newsletter on all the exciting Vic-20 programs from New Zealand where we produce Software even better than we do Lamb.

**YOU PAY ONLY £3.00 AND THAT
INCLUDES AIRMAIL POSTAGE
(REAL STAMPS) FROM N.Z.
MONEY BACK GUARANTEE**

RETURN PROMPTLY IF NOT SATISFIED FOR FULL REFUND

POST TO KIWI COMPUTER ACCESSORIES LTD
P.O. BOX 31-274 AUCKLAND NEW ZEALAND

Your starter for £150.

This complete starter pack for the price you'd expect to pay for a computer alone.

It's a complete computer system: the Commodore VIC 20 computer, a cassette unit, a simple explanation of computer programming (called "Introduction to Basic Part 1"), plus an exclusive compilation tape of four computer programs (Blitz, Type-a-Tune, Race, and Hoppit).

And all for just £149.99 or less.

It's a terrific opportunity to introduce yourself, and all your family, to the exciting world of home computers – and with what has been described as the best home computer in the world.

The VIC 20 has educational programs for all ages (spelling, physics, arithmetic, etc.), plus music, typing, chess and home accounts.

There are special programs like Robert Carrier's menu planner and BBC 'Mastermind', and not forgetting, of course, lots and lots of wonderful arcade games.

You'll very soon be exploring new worlds of colour, animation, and sound.

Not just with a vast choice of programs, but with unlimited scope for expansion in the future.

The VIC 20 is the perfect com-

puter to start with because you can keep adding to it, and so get even more enjoyment out of it.

There are printers, disk drives, memory expansion packs and many other peripherals to choose from.

Which means, as your confidence grows, so can your VIC 20.

Get the VIC 20 starter pack today, and we promise you'll never look back.

 **commodore**
VIC 20

YOU CAN SEE THE VIC 20 STARTER PACK AT ALL BRANCHES OF DIXONS AND WALLACE HEATON, AND AT SELECTED BRANCHES OF BOOTS, RUMBELOWS, LASKYS, CURRYS, GREENS, ORBIT, MENZIES, LEWIS'S, MAKRO, TESCO, FINE FARE, WIGFALLS, SPECTRUM, COMET, JOHN LEWIS, WOOLWORTH, REDIFFUSION, CO-OP AND OTHER GOOD RETAILERS. ALSO AT BRANCHES OF A NATIONAL NETWORK OF COMMODORE COMPUTER DEALERS.

The All-Purpose System

The MTX Series is a new departure in micro-computer technology. Whether your needs as a user are for personal programming, games playing, scientific or process control, educational or business use the MTX Series is already capable or very easily adaptable to almost every application. Glance through the standard features below - you'll see what we mean.

Hardware - 32K RAM on the MTX500, 64K on the MTX512.

The MTX500 has 32K of user RAM as standard (64K on the 512), expandable to 512K plus 16K of video RAM, controlled by a separate Video Processor. Sixteen colours, 40 column text, 256 x 192 high resolution graphics with all sixteen colours available, and 32 easily moveable user defined graphics characters (Sprites) combine to make effective screen displays quick and simple to achieve. Standard outputs are centronics printer port, two joystick ports, an uncommitted I/O port, 2400 Baud Cassette port, separate TV and Video Monitor ports, 4 channel sound with hifi output plus a dedicated cartridge port. Other standard features include the Z80A processor running at 4MHz, real time clock, full moving key keyboard with 79 keys including eight 2-function keys and separate numeric pad.

Software

The MTX's 24K ROM contains several languages and routines which enable the novice or the experienced programmer to make full use of the machine. Standard languages are MTX BASIC, MTX LOGO commands, NODDY. ROM routines include an ASSEMBLER/DISASSEMBLER with screen display of the Z80 CPU registers, memory and program, which can be manipulated from the keyboard. Machine code programs can be stepped through one instruction at a time, and easily called from within BASIC programs. A further feature is the Virtual Screen facility which enables the programmer to split the screen into a maximum of eight sections to work independently whilst maintaining all full screen facilities. Pascal is available as an add-on ROM pack.

The Disc Based Computers from Memotech

Designed to use the full power of the MTX computers the FDX and HDX make perfect business systems at prices which make perfect business sense. Both feature the CP/M operating system, giving instant access to a wide range of proven application software. Available in October these feature:

- Full Western Digital floppy disc controller set with SASI interface for 4 drives, CP/M types 0-13.
- minimal latency, very high data transfer rates
- optional Colour 80 Column Board
- optional Silicon Discs (1/4 Mb) which dramatically increase the efficiency of 8 bit software to those of 16/32 bit software; increases life and reliability of mechanical drive
- permits single disc CP/M operation

FDX—Floppy Disc System

1 or 2 5 1/4" Qume drives 500K unformatted, 347K formatted,

HDX—Hard Disc System

5 1/4" Qume drive, 500K unformatted, 347K formatted,
5 1/4" Winchester which may be 5, 10, or 20 Mb

All Memotech products are designed and manufactured in Oxfordshire, England

CP/M is a trademark of Digital Research Inc.

MEMOTECH MTX SERIES

CONTINENTAL SOFTWARE

We're not just playing games...

BLOBBO

A fast maze chase with untold perils and hazards.

TOADO

Get the toad back to his nest – but don't get run over or drown on the way.

SUPER MINEFIELD

You may have seen other Minefield games but ours has tanks that lay invisible mines, and spiders that are *very* tricky to avoid.

CONTINENTAL INVADERS

Classic arcade action, with all the features that make this game so popular.

KILOPEDE

This one is very fast – its not easy to get past level two.

RADAR/SONAR

Eliminate submarines with a combination of radar screen and sonar, very realistic.

FLIGHT SIMULATOR

Take off, navigate and land your high powered light aircraft. All the features of true flight.

ALSO AVAILABLE:

RESCUE, BEAVER, CONTINENTAL RAIDERS, PILE UP, SIGNAL MAN and many more.

we mean business too.

MTXCALC

Sophisticated and powerful, the professional spreadsheet program.

MTX WORD PROCESSOR

All necessary features are included to give a powerful business tool.

ACCOUNTING PACKAGE

Sales and Purchase Ledgers, stock control, payroll – the complete business system.

PROJECT PLANNER

Speaks for itself, and helps you achieve deadlines efficiently and effectively.

STRATEGY BOARD GAMES

CHESS, BACKGAMMON, OTHELLO, DRAUGHTS.

EDUCATION PROGRAMS

MATHS I PHYSICS I

The first two programs in a series of specially written software designed to teach at the pace and level best suited to the user.

Software for the
MTX
SERIES

SOFTWARE

AUTO SPRITES

The CBM 64 is renowned for its powerful Sprite Graphics. These two programs by Brian Candler demonstrates them for you.

This utility is invaluable for anyone who has tried to write 'Asteroids', real-time 'Star Trek' or any other fast-action game on the Commodore 64 using its powerful Sprite Graphics capabilities.

The problem with these games is the amount of movement needed, which tends to be slow and jerky from BASIC — and few people have the time or experience to write a machine-code routine each time. The program presented here, called "Auto-Sprites" solves these problems: it allows you to give each sprite not only an X-Y position but also an X-Y velocity. Once a sprite has been given a velocity, it will continue to move, even while the BASIC program is doing something else (like checking for collisions).

First enter the "Auto-Sprites" listing and SAVE it. Type RUN and any errors in the data will be reported, along with their line numbers. If a line turns out to be

correct, check the line before it and lines 50000-50030.

When "Auto-Sprites" has been typed in correctly, you can begin to use it. The first line of your program must be GOSUB 50000, which is line 10 in the listing. If you plan to use data in your program, you must be careful — the DATA statements must come after line 60160, and you must not use RESTORE, or you will re-read the machine-code data in lines 60000-60160.

Sprite Power

Now you can use the real power of "Auto-Sprites". The command SYS M1 enables sprite movement. However, nothing will be seen to happen because the sprite velocities are initialised to zero (actually 128 — see later). You may now set the velocity of a sprite. Type:
POKE XV + (sprite number),N1

POKE YV + (sprite number),N2

Where N1 and N2 are the speeds in the X and Y directions respectively. A value of 128 represents zero speed; 255 is maximum positive speed (right or down); 0 is maximum negative speed (left or up). This may seem an odd system, but it is because POKE can only take a number in the range 0 to 255.

The actual speed of the sprite is (N-128) * 3.75 pixels per second, where N is the number which you POKEd. The speeds of all eight sprites may be set in this fashion, and they will continue to move until their speed is changed by another POKE, or RUN/STOP and RESTORE are pressed together.

This program automatically handles the Most Significant Bit of the X positions, wrap-around, and the difference between PAL and NTSC Commodore 64s.

AUTO SPRITES

One last feature it provides is automatic timeout, if the following instruction is executed:

POKE TM + (sprite number), NN

Then the specified sprite will disappear NN 60ths of a second later (NN must be in the range 1 to 255). When a sprite disappears it is

still moved, though invisibly, because its enable bit in the Sprite Enable register has been set to zero.

"Auto-Sprites" makes all sorts of fast-action games, from zap-the-aliens to 'Frogger'-type games, simple, fast and effective.

For example, using the demonstration program listing, when the balloons are flying across the sky, press RUN/STOP. They will still move even if you do something else, like typing LIST. N.B. 'Auto-Sprites cannot be used with 'BC BASIC'.

HOW IT RUNS

All the BASIC program does is to load up a machine-code program from the data in lines 60000-60160 into memory, and to set up the variables as detailed. The actual sprite movement is achieved by means of the Commodore 64's 60Hz interrupt facility — every 1/60th of a second, the machine stops for an instant to scan the keyboard,

update the clock etc. and 'SYS M1' calls a machine-code routine which makes the CBM 64 move its sprites at the same time. SYS M0/ calls a routine to reset the 'interrupt vector' as it is called, so that sprites are not moved.

The actual data is in 6502 machine-code and too complex to discuss here, but should be comprehensible to anyone with a

thorough understanding of machine-code (and perhaps a disassembler).

Auto-Sprites may be used from machine-code; to make writing m.c. programs such simpler, simply replace the POKES with the appropriate STA instructions. Use JSR \$C0/30/ for SYS M1 and JSR \$C0/3D for SYSM0/.

HINTS ON CONVERSION

Very few machines other than the 64 have Sprite Graphics, and so the program cannot be used on very many other machines at all. However, for anyone with, say, an Atari, and who is brave enough to try to modify the program, the following locations may be useful:

D000,D002,D004...D00E	Lower 8 bits of X co-ordinate of sprites 0-7.
D001,D003,D005...D00F	Y co-ordinates of sprites 0-7.
D010	Most Significant Bit (Bit 9) of X positions.
D015	Sprite Enable register.
0314,0315	IRQ interrupt vector.
(If you are going to try to modify it — good luck!)	

Variables used

Sprites are controlled and positioned as normal — to help you, "Auto-Sprites" sets up the following variables:

V is the address of the VIC chip.

V1 is the address of VIC plus 1 (used when setting Y positions).

MX is the address of the most significant X-bit register.

EN	is the address of the Sprite Enable register.
XE	is the address of the X-expand register.
YE	is the address of the Y-expand register.
SS	is the address of the sprite-to-sprite collision register.
SB	is the address of the sprite-to-background collision register.
CO	is the address of the first Sprite Colour register.
SP	is the address of the first Sprite Pointer.

***Inside...
New Interface 2
and ROM cartridges!
New Software!***

TAKING NEW SOFTWARE IN NEW DIRECTIONS

You'll see that this issue of Sinclair Special devotes considerable space to software. Why, when we've so much to say about hardware and peripherals? Simply because at Sinclair we believe in supporting first-class hardware with first-class software.

This month sees the start of a new commitment to education in our catalogue, both for adults and children.

In the field of micro theory, we've programs like Beyond BASIC and Make-a-Chip, which take you from the creation of simple ZX[®] assembler subsets to simulated circuit design projects.

There's Musicmaster, to teach you music terminology, note values and composition.

And if you're keen to beat your Spectrum at chess (which can be hard), you'll certainly want to try Chess Tutor 1, the first program in a complete chess masterclass.

Coming soon...

In the pipeline are many new releases, some of which break completely new ground. LOGO and micro-PROLOG for instance. They're fifth generation languages which will take you and your Spectrum closer than ever before to the creation and application of artificial intelligence.

A formal agreement between Sinclair and Macmillan Education has been announced, the first results of which will be published this autumn. These consist of five programs in a complete early reading course plus the first four of a series of programs based on Macmillan's top selling Science Horizons Scheme. All programs are designed for use in schools or the home.

And with Blackboard software, we're publishing six more home education programs for primary school children. Covering alphabet, spelling and punctuation, each of these programs is a true gem, unlike any other education software, and fascinating to run. Even for adults!

I believe that these new titles represent a major advance in educational software for the home.

New ROM software too!

You may well have heard news of ZX Interface 2[®] and ROM cartridge programs. You'll find full details of the Interface and its software on the facing page (and there's an order form on the back page too!). These offer an instant games playing facility at unbeatable prices, and expand the possibilities of using your Spectrum in yet another direction.

Applications Software Manager

SOFTWARE UPDATE

The latest cassette software for ZX[®] Computers

Chess Tutor 1

For 48K RAM Spectrum. £9.95.

Chess Tutor is a new way of learning all about chess – using your ZX Spectrum.[®]

It starts from the beginning by teaching you about the chess pieces and the way they move – including castling, en passant, promotion, check, checkmate, stalemate and perpetual check.

Then it teaches you the basic tactics – pins, forks, double attacks and skewers.

There are over 120 exercises and over 200 questions for you to answer – with demonstrations and hints from your ZX Spectrum when you want them.

You can choose which parts of the course you want – and even experienced players may be surprised at what they can learn from Chess Tutor.

Musicmaster

For 48K RAM Spectrum. £9.95.

Musicmaster turns your ZX Spectrum into a musical instrument which will not only play tunes, but will also demonstrate key signatures, durations of notes, and scales.

You can write your own tunes – in any key – play them over and over again, save them on tape, modify them.

You can either write your music on a stave, or place a simple overlay on your Spectrum for a 17-note keyboard.

Make-a-Chip

For 48K RAM Spectrum. £9.95.

Make-a-Chip teaches you the basic elements of circuit design, shows you how they fit together, and then lets you design and test your own circuits.

When you have designed a circuit, you can give it inputs and outputs and your ZX Spectrum will check it for you. Then it will run it, or tell you what's wrong so that you can modify it.

Make-a-Chip is a fascinating way of finding out how computer logic works.

Print Utilities

For 16K and 48K RAM Spectrum. £9.95.

Increase the printing and display facilities of your ZX Spectrum with the Print Utilities program.

Print Utilities enables you to enhance your programs by generating characters of eight different sizes which you can place anywhere on your screen.

Beyond BASIC

For 48K RAM Spectrum. £9.95.

Takes the agony out of assembler. Takes the mystery out of machine code.

Beyond BASIC gives you a deeper insight into the workings of your ZX Spectrum. It explains what happens inside your micro when you run a program, and it teaches you simple Z80 machine code programming.

A major feature of Beyond BASIC is that it enables you to write your own Z80 assembler programs – then you can actually see on your screen how they affect the ZX Spectrum memory and registers.

ZX INTERFACE 2[®]

The New ROM Cartridge/Joystick Interface

**Loads programs instantly!
Takes two joysticks!
Just plug-in and play!**

The ZX Interface 2 is the latest new peripheral for the ZX Spectrum[®] system. It enables you to use new ZX[®] ROM cartridge software: plug-in programs that load instantly. It allows you to use two standard joysticks, without the need for separate, special interfaces.

To use new ZX ROM cartridge programs, just connect Interface 2 to the rear of your Spectrum or Interface 1 and plug in the cartridge of your choice. The program is then loaded, ready to run!

You can use any joystick that has a 9-way D plug. Use one or two of them for extra fun with ZX ROM cartridge or Sinclair cassette programs – or with dozens of other Spectrum-compatible programs!

SEE BACK
PAGE FOR
ZX INTERFACE 2
AND
ROM CARTRIDGE
ORDER FORM!

...AND BRAND NEW ROM CARTRIDGE SOFTWARE!

There's already plenty of choice of ZX ROM cartridge programs for your Spectrum. Some are old favourites, in an exciting new form. Others are new.

And now, thanks to ROM cartridge technology, you can run them *all* on a 16K RAM Spectrum, even if they were originally written only for 48K machines!

Every ROM cartridge program loads fast and faultlessly. No wires, no waiting, no worries about loading errors! All of them are affordably priced too, at £14.95.

New! PSSST

Robbie the Robot sits in his garden. Help him fetch compost to cultivate his prize Thyrgodian Megga Chrysanthodil. Help

him make the right choice of pesticide, to ward off devilish insects. Stop the insects breeding to overwhelming numbers before Robbie's plant has bloomed. PSSST is horticulture with a horrendous twist!

One and two player option, with a host of features including sound effects.

Chess

This sophisticated program does everything you'd expect at board game level, and much more besides.

The high-resolution chess-board and pieces are arranged in a row and column system, so it's easy to key in your moves.

At any stage of the game you can request the computer to suggest a move, reverse roles or change the level of skill.

Full-colour high-resolution graphics.

Backgammon

Everything you need to play the famous and deceptively simple board game. Board, stones, rolling dice and doubling dice are shown in full colour and high resolution. Choose from four levels of skill to suit experts and beginners alike – full rules are included.

Space Raiders

Your skill is all that's stopping successive waves of aliens from destroying Earth. Use your gun base

to attack. Shelter behind buildings... move out and blast the passing alien soaceship!

Full-colour high-resolution graphics with sound.

Planetoids

Dodge and swerve using your thrust button, turn on a planetoid... fire! But beware – the alien ship moves fast to destroy you with cluster bombs. And when it comes to the crunch, use your hyperspace button!

Full-colour high-resolution graphics with sound.

Hungry Horace

Horace is forever being chased around the park by guards.

He steals their lunch, eats pathway flowers and creates chaos in the park by ringing the alarm!

You'll have to be quick to keep Horace out of trouble!

Full-colour high-resolution graphics with sound.

New! Tranz Am

Set in a future time ruled by cars and trophies, in a land where petrol replaces gold, and status is possession of the 8 Great Cups of Ultimate.

Driving your Super Blown Red Racer, use your skill to outwit and crash the Deadly Black Turbos. Use your instruments to locate and collect the trophies – before you overheat or run out of fuel.

A program with outstanding multi-directional movement, graphic features, and a playing area equivalent to more than 600 times actual screen area.

Horace and the Spiders

Guide Horace on the hazardous journey to the cobwebbed house full of poisonous spiders.

Safely in the house, you must move along cobwebs, choose a spot... and jump on it! The spiders will be in a frenzy – scuttling to repair their precious web.

And when a spider is spinning a new section, you're safe to attack and destroy it!

Kill all the spiders, and a new web appears... with even more spiders to catch.

Full-colour high-resolution graphics.

New! Cookie

You're Charlie the Chef, who keeps his ingredients locked in the larder. But if the ingredients escape, they

bring the inedible Nasties with them!

You must daze the escaping ingredients with flour bombs, and knock them into the mixing bowl. Stop them getting into the dustbin, at all costs! And beware of Nasties that get into the mixing bowl!

Cookie is fast-moving panic in the pantry, with a cast of real characters. A program to make you smile – and sweat!

New! Jet Pac

As Chief Test Pilot of the Acme Interstellar Transport Company, your task is to deliver and assemble spaceship kits. On your way round the galaxy, you're free to collect precious stones and gold.

The catch? Rocket fuel is precious and scarce. And the aliens don't take kindly to the theft of their valuables. You'll need your wits and your lasers!

With a host of features, including multi-directional movement, explosions, sound effects and one and two player option.

ZX MICRODRIVE

NOW ON RELEASE

The ZX Microdrive[®] System – as you'd expect from Sinclair – is unique to the world of computing. It's a compact, expandable add-on system which provides high-speed access to massive data storage. With just one Microdrive alone (and Interface 1), you'll have at least 85K bytes of storage, the ability to LOAD and SAVE in mere seconds, the beginnings of a local area network of up to 64 Spectrums, and a built-in RS232 interface! The cost? Less than £50 for each Microdrive.

How to get ZX Microdrive
Spectrum owners who bought direct from us, by mail order, have been

sent full details. Order forms are being mailed in strict rotation, so if you haven't yet received your order form please bear with us. We're making good progress in meeting the huge demand.

If you didn't buy your Spectrum by mail order, don't worry. Send us the form from the bottom of this page. We'll add your name to the mailing list, and send you details by return.

Each Microdrive costs £49.95. Interface 1 costs £49.95, but just £29.95 if purchased with a ZX Microdrive. Extra ZX Microdrive cartridges: £4.95.

How to order

Simply fill in the relevant sections on the order form below. Note that there is no postage or packing to pay on some purchases. Orders may be sent FREEPOST (no stamp needed). Credit card holders may order by phone, calling 01-200 0200, 24 hours a day. 14-day money-back option, of course. Please allow 28 days for delivery.

[®] ZX, ZX Spectrum, ZX Interface and ZX Microdrive are all registered trade marks of Sinclair Research Ltd.

sinclair[®]

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey, GU15 3PS. Telephone: (0276) 685311.

To: Sinclair Research Ltd, FREEPOST, Camberley, Surrey, GU15 3BR.

get this, the ...

Micro-Myte

60

Only

£48.00

complete, inclusive of
VAT, post and packaging
in the UK only.

It's the high speed computer phone link you have been waiting for:

Transmits/receives at 1,000 Baud: Three times the speed of most other acoustic modems (including professionals).

Economic to use: Communicates data direct between compatible users. Typically 120,000 bits per two minutes of telephone time. (Cheaper than a first class letter.) Also twelve times faster than a telex.

Simple to operate: Connects directly to your cassette input/output sockets. Use your home computer like an on line terminal. Link up with your friends by telephone or cable.

The Micro-Myte 60, in its sturdy moulded plastic housing, complements your home computer equipment.

**No fuss, no hidden
extras, no rental
costs**

Each kit comprises an acoustic modem, ZX81 and Spectrum software on cassette, connection cable and operating instructions, together with a twelve month guarantee.

**YOU CAN PRE-RECORD PROGRAM OR SCREEN
CONTENTS ON TAPE. YOU CAN TRANSMIT
OFF TAPE OVER THE PHONE AND YOU CAN
RECEIVE ON TAPE.**

STOP PRESS!

Micro-Myte 60 will operate with all makes of home computer software available soon

**YOU CAN NOW
TRANSMIT AND
RECEIVE
OFF TAPE!**

I am a ZX81/Spectrum user (specify.....)

Please send me Micro-Myte 60 modem(s) at £48.00 each. I enclose cheque/postal order, payable to Micro-Myte Communications Ltd.

Callers welcome

ATARI DISASSEMBLER

Disassemble your machine with this utility by F.M. O'Dwyer.

This is a program for a disassembler utility which uses approximately 5K of RAM.

Using the program

When you RUN the program you should get the prompt **STARTING ADDRESS?** Enter the address from which disassembly is to start in decimal or hexadecimal.

Precede a hexadecimal address with a dollar sign and use no spaces.

Now you should see **PAGING (Y/N)?** If you answer Y followed by return, the disassembly will stop each time the screen is about to fill. To resume press the space bar. To **QUIT** disassembly press Q and this will return you to the **STARTING ADDRESS?** prompt at any point

during the disassembly.

The program prompts **OUTPUT DEVICE?** next and you should answer with a device specification such as S or S: to list to the screen. If you specify another device such as printer, disc or cassette, then output is initially to the screen but is followed by output to the specific device. To close the file and restore the device, press Q.

Variables used:

TABLES: A string of length 1024 bytes. Four bytes are held for each possible opcode (0-255), three bytes for the assembler instruction (e.g. BNE) and one byte for the addressing mode. The 13 addressing modes are given code numbers 0-12 as shown in table 1. If an

opcode doesn't exist in the instruction set, it is given the mnemonic. This method of holding the data may seem extravagant, but it is very efficient in terms of speed.

BYTES: A string containing the information about each

addressing mode.
As,Hs: General purpose strings
M: current addressing mode
B: no. of bytes in operand
AD: address in memory
DEV: = 1 if second output device in use
PAGE: = 1 if output is to be paged
LI: running count of lines output to screen

HOW IT RUNS

Lines 180-240 Initialisation
Lines 250-360 Input options
Lines 370-770 Major loop. Disassemble one instruction.
Lines 780-830 Subroutine to output a hexadecimal byte
Lines 840-870 Page subroutine. Wait for space bar.
Lines 880-1730 Data for TABLES. Data is held in the following format:

(1) If the instruction exists, the mnemonic followed by the addressing mode, e.g. DATA BNE,10
2) If the instruction doesn't exist, a null string. Null strings occur between adjacent commas, after a comma at the end of a line, or before a comma at the beginning of a line.

DEBUGGING

If the disassembler seems to disassemble wrongly proceed as follows:

1) Check the area in memory that you are disassembling. If it changes rapidly (e.g. a hardware register or an interrupt driven

counter or basic register) then it may have changed its value during disassembly, hence the error.

2) If you are sure that the memory is not at fault (e.g. it is ROM) then check the offending opcode against the data statements in the program, as follows: (e.g.

opcode 00 is wrongly disassembled as TXA, say)

a) Find the DATA statement for opcode 00 using the REM statements above each one. Line 880 says that the next line has opcodes 00-05, so 890 contains opcode 00. Find opcode 00 in line 890 by counting data items from

the left (a data item is a pair, e.g. BNE,10, or a null, e.g. ,). In line 890 opcode 00 is the first data item, BRK,0 which we have wrongly typed as TXA,0, so all that remains is to alter that data item and the fault should disappear. The same approach can be used to change the mnemonic set to other processors of the R65 variety.

b) If the fault is not in the DATA

then check the body of the program.

TABLE 1 Addressing Modes

CODE	NAME	EXAMPLE
0	Implied	TXA
1	Accumulator	ROL A
2	Absolute	LDA D000
3	Zero Page	LDA 01
4	Immediate	LDA 01

5	Indexed X	LDA D000,X
6	Indexed Y	LDA D000,Y
7	Indexed Indirect	LDA (00,x)
8	Indirect Indexed	LDA (00),Y
9	Z-page Indexed X	LDA 00,X
10	Relative	BMI D000
11	Indirect	JMP (D000)
12	Z-page Indexed Y	LDA 00,Y

HINTS ON CONVERSION

The program is useful for all 6502-based machines. The main peculiarities are in string handling and device handling. The DIM statement isn't required on most basics, and lines such as TABLES(LEN(TABLES)+1)=AS translate as TABLES=TABLES+AS. AS(n,n) returns the Nth character in AS, and AS(n) returns the substring beginning with the Nth character.

The statements referring to devices and streams may be altered to suit other micros, or simply left out. TRAP lineno is the name as ON ERROR GOTO lineno. GRAPHICS 0 clears the screen. The POKEs to location 764 deal with the keyboard. (764)=255 if no key has been pressed, 47 if Q has been pressed, and 33 if space has been pressed. POKE 764,255 clears the key.

Strengthen your hand

with Superbase 64

The complete information control system for the Commodore 64.

The World Famous Commodore 64.

No matter what your business or interest, with Superbase 64 you have a totally flexible 'record' system, as big as you want it, as fast as you need it.

Create your own formats, enter your records, change layouts and datafields.

Superbase gives you unrivalled control in home or office, business or professional practice, with a range of features including:

YOUR OWN RECORDS

- Design your layout using text, numeric, calculated result, date, linking and key fields.
- Record size up to 1100 characters spread over up to 127 items.
- Number of records limited only by your equipment.
- As many databases as you want - each with up to 15 files.
- Learn fast through built-in HELP screens - then add your own notes.

FAST ACCESS

- Keyed records for high speed retrieval - 3 secs for any file size.
- Select and search for any name, description, number, date, etc in multiple combinations.
- Sort records into any order.
- Display selections or generate printed reports.
- Browse through records matching on any criteria.

TOTAL CONTROL

- Links to other programs and EASY SCRIPT for mailshots, high-quality letters, quotes, tables, etc.
- Effective management of invoices, addresses, stock, membership, appointments - any and every kind of record.
- English like commands for easy conversational programming, plus built-in BASIC.

DATABASE MANAGEMENT

- Easy to understand menus or alter length - no file rebuilding needed.
- Update files with automatic batch processing option.
- Calendar arithmetic for effective time management.
- Display quantities, values, totals, as you enter them.
- Formulas for on-screen result calculation.

SOFTWARE

DOUBLE SPEED SAVER

P.J. Sadler

The Atoms' cassette operating system, whilst being flexible and versatile can save and load files only at the reasonably modest rate of 300 Baud. Hence there are fast cassette operating systems available from many of the interested software houses. Feeling unwilling to pay for the faster systems, I loaded my disassembler and set about unravelling the resident system, preliminary to writing my own. After some hours I had finally analysed the routines and subroutines in sufficient detail to set about the task. The listed program came from that analysis, which revealed that with a few cunning POKES, a doubling of the speed of the byte read and write subroutines could be achieved.

Background Details

The system, as the handbook indicates, uses eight cycles of a 2400 Hz tone to represent a logic 1, and four cycles of a 1200 Hz tone for a logic 0. On inspection of the byteput routine, which starts at # FC7C, it can be seen that one cycle of a 1200 Hz tone is achieved by setting bit 2, and vibrating bit 0 of # B002, producing a pulse to the

cassette tape. In the ROM, the start of the routine that does this is at # FC9C, and it uses a subroutine at # FCD8 to give the correct interval between pulses. The four cycles are counted in the Y register which is set with an immediate LDY instruction at # FC9C. So if address # FC9D could be set to hold 2 instead of 4, then two cycles only would be produced. The same approach can be made with the 2400 Hz tone of which eight cycles are counted off in the X-register, again by the subroutine at # FCD8, but this time entering at # FCDA, with the X-register set before the call in an immediate LDX instruction at # FC92. So setting address # FC93 to hold 3 would produce four instead of eight cycles of 2400 Hz tone.

Change Around

Changes must now be made to the byteget routine to recognise the shorter form. The routine resides at # FBEE, and uses a subroutine at # FCBD to recognise the incoming tones and count their cycles. If judicious changes were made to bytes at # FBF5, # FCO2 and # FC17, the routine would

recognise the double speed byte.

Of course with the routines residing in ROM the above changes can't be made. They must first be relocated to RAM and the changes made there. The program therefore requires not only space for itself, but also a further 260 bytes for the relocated routines. The program itself is only 210 bytes long, and the relocated code consumes 204 bytes, small enough to fit into the space between # 2800 and # 2900. One side effect of the changes is that the routine producing logic 1 unsets bit 2 of # BOO2, and logic 0 sets bit 2 which produces an audible noise on the Atoms' speaker during the save operation; this is cosmetically undesirable, though it is novel to hear your file being loaded, indeed if the relocation area chosen is in the upper text space then you get not only audible SAVE, but visible SAVE and LOAD.

All of the existing facilities are unaffected, including the sum error checking, and I found that no adjustments were required to the volume or tone controls of my tape recorder.

So here is the listing, using ATOMBASIC abbreviated form to save space:

HOW IT RUNS

Line 10 Requests relocation address from user and assigns to variables P and Q.
Lines 20 and 30 Loop to transfer code from ROM into relocation area.
Lines 40 and 100 Point BPUT and BGET vectors to relocated code
Line 50 Modify BPUT routine

Line 60 Modify BGET routine.
Enter the program and save it to cassette using *SAVE"FASTCOS"SSSS EEEE and you can then *LOAD the program to any area of free memory whenever the faster system is required. Using the faster system is then exactly the same as with the original system.

PROGRAM LISTING

10 IN."SPECIFY RELOCATION ADDRESS" P; Q = P

100 p ?I = P; !?I = P & FFFF/256; R.

- This is an entirely new computer system. It was designed with both eyes fixed firmly on the future. So that whatever shape the future takes, we'll be able to fit it into the system. Just as simply as the peripherals and software already available fit into the system. That way, the system will grow with you. And you'll never get left behind.

- Based around the Z80A microprocessor, and utilising Microsoft™ BASIC, Aquarius™ has 8K ROM and 4K RAM resident within its console. It is able to provide up to 16 colours and resolution of 320x192, and generates its sound directly through the television's speakers.

- With twin cartridge ports, the mini-expander allows simultaneous use of additional RAM and software cartridges. Twin disc game hand controls are included and the unit provides two additional sound channels. The 16K RAM cartridge plugs into either the console or the mini-expander, increasing Aquarius™'s RAM capacity to 20K.

- With the ability to reproduce the entire graphic and character set of Aquarius™ at 80 characters a second, the printer's 40 column output allows transcription of the complete monitor image.

Using standard audio cassettes, the data recorder provides storage for programs and information, and allows the use of cassette based software. Incorporating a digital tape counter and transmission indicator, it operates sequential searching.

- A large number of games, designed to take advantage of Aquarius™'s sophisticated colour and sound capabilities, are available on cartridges that plug into the console either direct, or through the mini-expander. Cassette based games can be used via the data-recorder.

A wide range of preprogrammed cartridges is available, including the LOGO teaching program and practical home data systems like FILEFORM™ and the spreadsheet calculator package, FINFORM™.

COMPUTER CAMPS

Last summer 'Computer Camps' sprang up all over the country. Jane Price visited one of the Inter-Action Trust schemes in Inner London

Community Computer Camps are one of the best ways of keeping kids usefully occupied during the summer holidays to have emerged in recent years.

Thousands of British youngsters this summer at last had the chance to take advantage of one of the 40 one week non-residential courses running from July to September. Not only do the

children learn something useful they also have tremendous fun doing so.

Open to children between the ages of 9-16 the courses' aim is to introduce them to the world of computing and educate them in basic programming techniques.

I visited the Kentish Town Computer Camp towards the end of their summer run and found

happy, chattering groups of youngsters clustered round Atari computers, busily devising games and graphics programs. They were obviously enjoying themselves while learning and the 'school atmosphere' was distinctly absent. Friendly, informal instructors were constantly on hand to encourage and give advice while quite advanced projects were being

attempted by the children themselves. The more experienced students had fun helping others with their programming problems. David O'Keefe, a 13 year old from central London, was vehement in his praise of the course. Although he has an Apple II at home, he didn't know the first thing about it until he went along to the camp and was introduced to computers and programming by their simple informative approach. Halfway through his week's course, he was confident in using the Atari and had begun to write his own game called Aliens. David really enjoyed the course and is hoping to repeat it next year — he now plans a career in computing!

Children with more advanced knowledge of computing skip the introductory course and move 'up' to the Polytechnic in Kentish Town, where on BBC computers they learn more of the intricacies of programming in BASIC and FORTH.

The camps, organised by local community action groups, were initiated by the Inter-Action Trust, a London-based charity, in association with Atari International (UK). The national programme of these summer schools was developed from an original idea of the Inter-Action Trust, who realised the need for children, particularly those from less-privileged backgrounds, to see, touch and gain a basic understanding of what computers are capable of achieving and their applications in today's world. The Trust hoped especially to reach those children who might otherwise have no direct contact with computers.

Origins

The Trust have been operating a Computer Consultancy service for several years, advising other charitable and social service departments on the best system for their needs and are therefore well-qualified for running the Computer Camps. They saw a waste of resources occurring through the long summer holidays, when computers lay unused in dusty classrooms. Student Computer Scientists, teachers and specialists with time on their hands were approached and with the help of local authority grants and loans of computers through Atari, the Camps took off, the first one taking place at Inter-Action Group's headquarters in Kentish

Children program the robot arm to comb hair at an Inter-Action Community Computer Camp. The camps are sponsored by Atari and the robot arm is loaned free by Cyber Robotics.

Town in the summer of '82.

This year, Molly Lowell, the co-founder and field co-ordinator for Community Computer Camps, channelled her energy into getting funding and sponsorship for a whole network of camps around Inner London and the rest of Britain. During the week's course, the children received expert tuition in basic programming techniques and considerable 'hands on' experience, with one Atari 800 home computer for every two students. All the children benefitted in gaining an insight into how computers can best further their education and employment prospects.

These camps are only possible through the generosity of companies such as Atari International, who this year loaned all the computers and software, and of the teachers who often work on a voluntary basis. Molly Lowell has worked out a cost effective system for the Camps. Groups can set up six one-week Camps for 216 young people with a Local Authority Grant of between £1300 and £2700, providing the premises are available free. The funding is needed for leaflets and staff, including the tutors, unless they will come as volunteers. If

disadvantaged young people at £5 per week are combined with those paying £25 per week, the amount of grant aid needed can drop to £1300 or less. The fees paid by the children include the cost of daily lunches.

The Camps in Inner London, were once again this year oversubscribed and the Trust find it a very difficult job deciding on which youngsters to take. As I have said, because the Trust is a charitable organisation, their selection procedure is biased toward the less privileged, but should some enterprising group decide to set up a Camp along similar lines, charging a reasonable fee to cover all costs, there is no reason why any youngster should be kept away. A comparison of such a Camp's costs with those of the commercial 'computer summer schools' shows the tremendous savings to be made by self organisation, perhaps involving schools, teachers and parents in the long summer break. Something to think about for next summer maybe? Anyone interested in finding out more about the Camps and how to organise one should contact Molly Lowell on 01-267 9421 for information and a fact sheet.

THE REVOLUTION IS HERE

FIFTH BY RICHARD TAYLOR

**A NEW AND INCREDIBLE EXTENSION TO BASIC THAT LETS YOU WRITE
FAST MOVING ARCADE GAMES**

Fifth has the following New Commands and functions:

All, Attr, Break Key Disable, Colours, Column, Current Direction, Disable, Enable, Erase, Fill, Find, Get Interact, Intparam, Jumps, Large, Let, Limit, Line, LMTPARAM, Mask, More, No, Object, Print, Put, Replace Rmove, Screen, Sound, Speed, Status, Temps, Use, Vector, Velocity.

Personal Computer News said:

"Fifth provides an excellent set of commands for programming arcade type games and makes it easy for you to write fast moving games in Basic"

The packages come with an extensive manual, a demonstration program and the fifth interpreter. The commands are entered as words into your program and give you INTERRUPT driven fast, high resolution SPRITE graphics without losing the simplicity of Basic.

ONLY £9.95

Available from Boots, selected branches of HMV, Selfridges and all good computer shops,
or from

C.R.L. 140 Whitechapel Road, London E1 1EJ

Just an example of the power of FIFTH

"ONE THING YOU'LL NEVER GROW OUT OF"

When we tell you that the new Spectravideo SV-318 is incredibly expandable, we mean it. If you think that goes without saying, just glance through a few of our competitors' ads. Time and again, you'll read about 'a wide range of expansion modules now in the pipeline', 'coming next year' ... 'in the shops soon'.

The SV-318 has a full supporting system of 14 peripherals, available now. Which means that when you're ready to take the next step, so are we.

For software, too, the SV-318 is second to none: built-in CP/M compatibility gives you immediate access to over 3000 existing programs. And, using Microsoft BASIC as its resident interpreter, it's a home computer that gives you real scope for writing your own programs. Compact good looks and a host of intelligent design features (including a unique built-in Joystick/Cursor Control) may be no more than you'd expect from such a powerful and sophisticated machine.

But the price may well surprise you. At £199 (incl. VAT), the Spectravideo SV-318 is far better value for money than any of its 'disposable' competitors.

SPECTRAVIDEO
SV-318
PERSONAL COMPUTER

- **Memory** - 32K RAM expandable to an incredible 256K, and 32K ROM expandable to 96K.
- **Expandability** - Full supporting system of 14 peripherals, including game adapter, 7-slot expander unit, floppy disk drive, data cassette, etc.
- **CP/M Compatibility** - Immediate access to over 3000 existing software programs.
- **Graphics** - 16 colours, and 256 x 192 high resolution graphics.
- **Sound** - 3 sound channels, 8 octaves per channel.
- **71 Key QWERTY Keyboard** - special features include unique built-in Joystick/Cursor Control.

MICROSPOT

CLEAR SCREEN

Fergus McDonald has designed a useful utility to put at the end of a program to make black holes and other effects appear.

This is a short routine which can be put to good use in a game needing effects such as Black Holes or hyperspace environments.

The subroutine is designed to be put in at the end of a program and has the effect of squashing down the screen into a little box, clearing it and then returning it to its normal size.

POKE 36866 and 36867 are the locations of the registers within the VIC which control the columns and rows of the screen. CHR\$ is the clear screen character.

PLANE SAILING

SPECTRUM ORIC ZX81 LASER BBC

AIRLINE Hijacks, strikes crashes and spiralling fuel costs must all be overcome if you are to succeed at this game. A wing and a prayer will not be enough to turn your £3 million to £30 million in the time allowed, but your financial wizardry will enable you to take over British Airways, or will it? Available for Spectrum 16K and 48K, Oric 48K, ZX81 16K, Laser 16K, BBC A & B

DALLAS Can you amass enough petrodollars to take over the Euing empire. Cut throat business and an eye for the main chance may get you there but you'll need nerves of steel to become the oil king of Dallas. Available for Spectrum 16K and 48K, Oric 48K, ZX81 16K, Laser 16K, BBC Model B.

CAMELOT As the banished Arthur Pendragon Excalibur is just one of the seven items you must find. They are all hidden in the countries shown on the map. Find all seven without falling prey to the Brigands, Dragons and Evil Magicians that stand in your way and make a triumphant return to Camelot to be crowned King. Available for Spectrum 48K, ZX81 16K and Laser 16K.

CORN CROPPER Limited cash and droughts are two of the problems facing the farmer. Planting fertilizing and harvesting must all be done economically if you are to reap the rewards offered in Corn Cropper. You choose the methods that will bring you success. Available for Spectrum 48K, BBC Model A & B (Called Farmer for the ZX81 16K).

Prices: ZX81 16K, Spectrum 16K, Laser, **£5**; Spectrum 48K **£6**; Oric 48K, BBC, **£6.95**

Available from all good computer shops or

MICRO FACTFILE

Factfile is our regular buyer's guide to microcomputers. Herein you will find all the important facts and figures on 28 of the most important micros on the market under £1000. The idea is that you are able to directly compare what different manufacturers are offering you and how much they are charging you for it. Many brochures and adverts bury the reader in a mass of irrelevant facts and figures, which make it difficult to judge one against the other.

Factfile sorts it all out for you!

Just look down the price index to discover which machines are in your price-range and then consult the 'cards' on each. All the information is in a standard form and has all been checked by our technical staff. The section is presented alphabetically.

As new machines become available, we will add them into the FACTFILE as soon as we can.

Factfile

RAM: Stands for Random Access Memory and it is in there to accept the user's programs. Amount of memory is measured in "thousands of bytes" or "K" ie, 8K. A byte is a computer 'word' or single piece of information, made up of eight 'bits' which are just 1 or 0. Hence you need thousands of bytes to store a reasonable size program, since each letter, number, full stop, comma, line number, etc, uses up computer 'words' quite rapidly.

As a guideline - you can get about 50 program lines into 1K and 250 into 8K. This is a rough estimate - don't take it literally! The figures are not straight multiples, because you need to allow the machine space to work on your listing, once you've typed it in.

ROM: Read Only Memory. The machine can look and see what is stored in the memory, but it cannot alter the contents, nor store anything new. Generally used for control programs, where the micro consults the memory to see what to do next at various points in the program. Languages, such as BASIC, are stored in ROM and allow the machine to interpret what you type in, in terms of its own 'machine code'.

SIZE OF BASIC: The number of bytes occupied by the BASIC language is important, as it is an approximate guide to the BASICs versatility. The more powerful the language, the easier it should be to use.

BUS CONNECTION: A socket on the micro which allows it to be linked up to various add-ons. This can take the form of many various items, ie, expansion box, printer, disc drives, plotting device. In short a BUS is an information 'window' through which the micro communicates with the outside world.

SERIAL / PARALLEL OUTPUT: This refers to the manner in which the micro transmits data to other units. If it puts out information in a long string, one bit after another, down a single wire or connector, it is a serial output. Parallel output is where pins or wires carry information simultaneously and are 'read' together as a block by whatever it is the micro is communicating with.

VIDEO OUTPUT: an output which will drive a monitor, as opposed to a TV set, allowing its use as a screen for the computer.

TEXAS INSTRUMENTS
HOME COMPUTER
MAGAZINE

TI-99/4A

The unbeatable TI Home Computer. It's all the computers your family will ever need.

Buying a home computer is something you have to get right first time. It's too late when you've got one to find it won't take plug-in software. Or can't be programmed without an expensive accessory.

The TI Home Computer is a real computer system

The TI Home Computer has got the memory power you might expect from more expensive computers, built in. At its heart is a powerful TMS 9900 16-BIT Microprocessor. Most other home computers have only an 8-BIT. And you can expand the memory from 16K of RAM up to 52K.

The total memory capacity is 114K Bytes.

A wide range of software for everyone

Another feature that makes the TI system so powerful, yet so easy to use is Solid State Software.™ These plug-in cartridges cover everything from space games like Parsec™ to teaching maths, managing home finances and composing music. And the range is getting wider all the time.

It even has what professionals look for in a home computer

CPU: TMS 9900 16-BIT, plus 256-byte Scratchpad RAM.

Memory: Total 114K bytes; 26K bytes ROM internal; up to 36K ROM cartridges external; 16K built-in RAM expandable to 52K bytes.

Keyboard: 48 Key QWERTY, alpha lock, function key auto repeat.

Sound: 5 octaves, 3 simultaneous tones, noise tone.

Colour: 16 foreground and background. High resolution.

Interfaces: Cassette, TV, 2 joysticks, main peripheral port.

™ trademark of Texas Instruments.

More than one programming language

The standard programming language, TI BASIC, is built into your TI Home Computer so you can begin programming right away. But there's an expanded range of optional languages like Extended BASIC, TI Logo, USCD-Pascal, TIFORTH and Assembler.

With these you can fully expand your programming skills.

A wide range of peripherals

Most computers lose a lot of memory when you add peripherals. The TI Home Computer is different. Every peripheral comes with its own built-in programs to keep the loss of memory to a minimum.

The convenient Peripheral Expansion System houses up to eight peripherals. Additional hardware cards simply plug in. You can even add a complete Floppy Disk Memory System.

The peripherals include memory expansion, RS232 Interface, P-Code card and more. There's also a sophisticated matrix printer and Solid State Speech™ synthesizer – which you can use with your own TI BASIC programs.

A lot more for no more

The TI Home Computer gives you so much more without costing more. At today's price it's exceptional value. Take your family round to try one. If you never try it you'll never know what you're missing.

SOFTWARE

IN AND OUT OF THE ATARI

Get to know the guts of your machine with this informative piece by M.W. Davies.

Have you ever wondered what happens when your Atari computer encounters one of the following instructions?

OPEN #1,4,0,"K:"	PUT #1,K:
OPEN #1,8,0,"E:"	GET #1,K:
OPEN #1,8,0,"S:"	LOAD "D:
LIST "P.	

The characters indicate to the internal program (operating system o.s.) which device we are referring to.

The standard accessible devices are:

Keyboard	_____K:
Display	_____S:
Editor	_____E:
Cassette	_____C:
Printer	_____P:
Disc	_____D:

These devices can all be utilized assuming a cassette, printer, and disc are connected. You could if you wanted, change these characters i.e. Change "C" for cassette to "T" for

tape simply by POKE 797,84.

Now use the command LOAD "T: to load from tape (cassette). Also you can use all the other commands such as: SAVE "T:, ENTER "T: , LIST "T: You will find the cassette functions exactly the same way as before when you used "C". You cannot however use "TLOAD" instead of "CLOAD" as this is a "BASIC" command interpreted by the "BASIC CARTRIDGE" which then passes the relevant device information on to the operating system. "CLOAD" will produce an error because "BASIC" will pass on information for a device "C"; the o.s. will then try to refer to C in its tables and will not now find a reference as we have changed the reference to "T".

Now try: POKE 809,70. You will find that instead of "D" for "DISC" you will have to use "F" for "FLOPPY". To return to the original "C" and "D" just press "System Reset".

In addition to being able to change

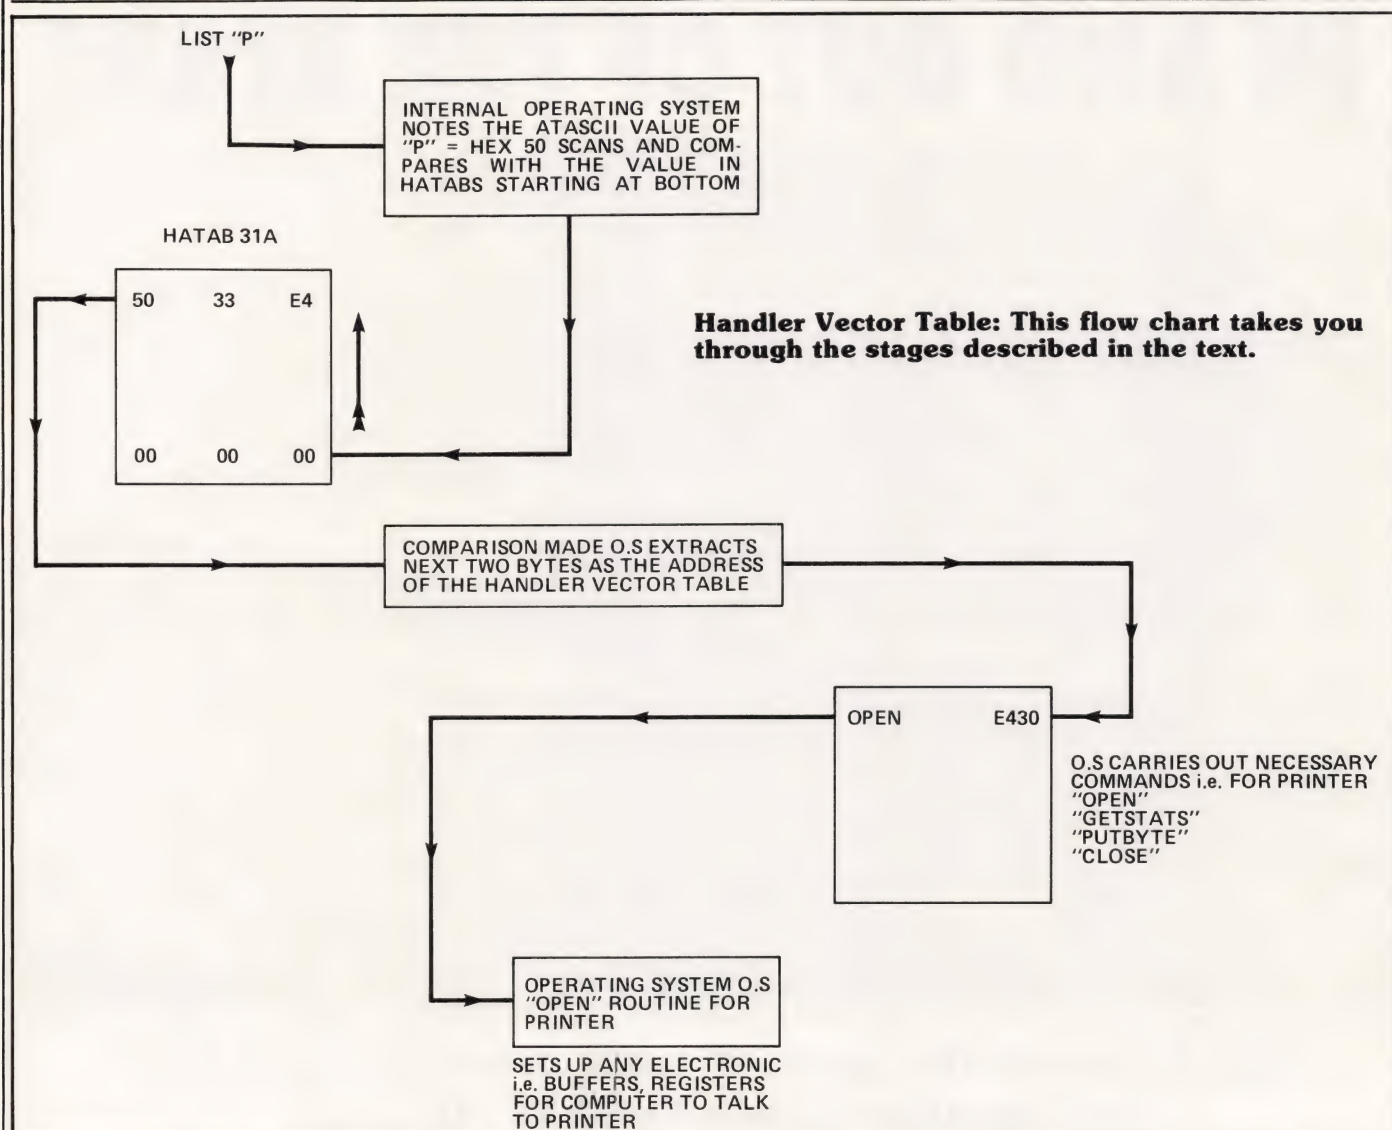

these device addressing characters it is possible to add a further six characters which, with the necessary additional handler programs, will allow you to put other devices onto your computer, or for an associated program to execute some particular task not already part of the existing operating system.

In the course of this article, by way of a simple example I will add the device character "B" with its associated handler program, which whenever used in BASIC i.e. LIST "B: will cause the keyboard speaker to beep continuously. Not a particularly useful device but an example which I hope will be simple enough to demonstrate the facility available for adding extra "device handlers". This term will be further explained in the text.

Interface Achievements

By way of a little incentive to try and understand the explanations

IN AND OUT OF THE ATARI

within this article, I might add that after I had finally understood the technique involved I was able to interface several different printers, serial and parallel, to my Atari computer without using any extra electronic hardware. In one instance a very minimum of simple logic buffering was required. The possibilities are there to interface virtually any logic device i.e. printers, magnetic tape, hard disc or even talk directly to another computer.

The reason all this is possible is due to the manner in which Atari designed their operating system which is the program permanently resident in the computer irrespective of any

cartridges being present or not.

With the o.s. is a program called Central Input Output (CIO). Anybody who's seen "TRON" should have a good idea as to it's function. Basically CIO has the responsibility of looking after any input or output to devices connected to the computer. It could also link us to other programs as intimated earlier, these programs being made to respond in a manner similar to a device.

Whenever a device character i.e. C or K is used within a program or as a direct command, the o.s. looks up in a table called "HATABS" (Handler Tables) information which guides the

o.s. to other programs used by CIO for that particular device. HATABS is a table resident in RAM starting at address 794(Decimal), 31A(Hex). It is loaded there by the o.s. everytime the computer is powered on or "system reset" is pressed. It consists of 12 x 3 byte entries plus two bytes at the end always containing zeroes. Every 3 bytes refer to a particular device.

The two bytes following the first (device character byte) are addresses of other tables within the o.s. called "HANDLER VECTOR TABLES", to be explained more fully as we progress. Thus if we input at the keyboard LOAD "C" (we're back to using "C" for

HATABS (at power up or after "reset")

Memory Address

3 Bytes

31A	50	75	80	50 =	ATASCII	"P"rinter
31D	43	40	E4	43 =	"	"C"assette
320	45	00	E4	45 =	"	"E"ditor
323	53	10	E4	53 =	"	"S"creen

326	4B	20	E4	4B =	"	"K"eyboard
329	44	CB	07	44 =	"	"D"isc
32C	00	00	00		No entry	
32F	00	00	00		"	"
332	00	00	00		"	"
335	00	00	00		"	"
338	00	00	00		"	"
33B	00	00	00		"	"
33E	00	00			Last 2 bytes always zero	

cassette again), the o.s. will recognise the C and start comparing the bytes in HATABS starting at the bottom and working upwards until it finds a comparison. The o.s. then looks at the next two bytes which give it the address E440 (HEX) of the Handler Vector Table for the cassette. What we did earlier was to change the value from "C" (43) to "T" (54 84 DEC).

When we said LOAD "T, o.s. searched and found a comparison where "C" would normally be found. Continuing our example using "C" we were referred to another table starting at address E440.

CASSETTE HANDLER VECTOR TABLE

mem addr	contents
E440	4B OPEN EF VECTOR
	2A CLOSE F0 VECTOR
	D5 GETBYTE EF VECTOR
	0F PUTBYTE F0 VECTOR
	27 GETSTAT F0 VECTOR

4A SPECIAL
EF VECTOR

4C JUMP
41 INIT
EF CODE

CIO COMMAND ROUTINES OPEN

Sets up any necessary electronic registers and timing. Checks to ensure that the device is not already OPEN i.e. in use. Returns to o.s. stating the success or failure to set up.

GETSTAT

Device controller is interrogated to determine if device is available and ready to either send or receive data. This status information is passed back to o.s.

CLOSE

The handler program is expected to conclude any transactions between the device and computer:

- 1) Send any remaining data to device.
- 2) Mark end of file i.e. cassette or disk.
- 3) Update any directories or allocation maps being used.

GETBYTE

This routine is called in response to "GET CHARACTERS" or "GET

RECORD". The handler gets byte of data from the device and passes it on to o.s. for further handling.

PUTBYTE

This routine is called in response to "PUT CHARACTERS" or "PUT RECORD". The handler accepts a single byte and passes it to device or device buffer.

SPECIAL

This routine handles functions that are not handled by the other entries such as: Disk file "RENAME", display "DRAW", etc.

Enter the program in Basic or for the Assembler "hackers", the listed assembler program. The assembler program is more informative if you understand assembler programming. Using the Basic program just "RUN" and then try "LIST"B" or "ENTER"B"

The assembler program was written to be an Autorun.sys program but if you go into BUG and G600 (ATARI ASSEMBLER) then go back into EDITOR mode and try "SAVE #B" or "LOAD #B". If you press "System Reset", which you will probably have to, then it will be necessary to repeat the above running instructions. Can you guess why?

THERE'S NO PRESENT LIKE THE FUTURE.

THE WORLD'S FINEST PROGRAMMING TUTORIAL FOR ONLY £12.95.

Thousands who own, or would like to own home computers have yet to experience the feeling of discovery that comes when you write your own programs. Yet learning programming can be easy.

'Learn Basic' from Logic 3 is the ultimate development of the method first devised at Strathclyde University – a straightforward, easily understood tutorial written by Professor Andrew Colin and Veronica Colin, authors of Britain's best-selling tutorial package.

Using the method tested by university students and used successfully by over 200,000 home computer users, 'Learn Basic' runs on your own computer and explains everything in clear non-American English without jargon or computertalk. In a matter of hours, you will be writing programs that work.

Essentially, 'Learn Basic' and the rest of the 'Learn Computing' Series that will follow soon are designed for people who want to keep abreast of the computer age. For people who realise that understanding computers is the key to future success, at school, at work and as a parent.

Make your future, and your family's future, richer this Christmas.

Get 'Learn Basic' by Logic 3 – two tapes and a full-size manual for Spectrum or Dragon (others soon) at just £12.95.

At that price, it's a gift.

Buy the Logic 3 'Learn Computing' Series at computer shops and major retail stores all over Britain. In case of difficulty, write to Logic 3 in Windsor.

TO: Logic 3 Ltd, Mountbatten House, Victoria Street, Windsor SL4 1HE.

If you would like to know more about using and programming a computer in your home, send this coupon for your free copy of our 16-page explanatory booklet "100 things you wanted to know about computers."

It will help you cut through the jungle of computer jargon, and give you news about software developments – even games. ☐

Or send for our software catalogue (tick either or both). ☐

VISIONS THE LAST WORD IN ELECTRON SOFTWARE

SNOOKER VE 01-32

Visions Snooker brings all the excitement and all the tension of big time tournaments to your TV set.

With an advanced program written by a 19 year old undergraduate at Queens College Cambridge, it makes Pot Black look like a load of old balls.

Visions Snooker for the **ELECTRON £8.95**

DAREDEVIL DENNIS VE 02-32

So you think you could be a stuntman? Well, test your skills against these hazards and see if you're still game. There are only three different stunts in this movie, so you shouldn't find the going too tough! There's no denying that the money's good, but the question you should be asking yourself is will you live to spend it? If you can ride a motorcycle — and wetbike — two of the frames should be child's play, but for the snow scenes you'll need to be of Olympic class. Dare Devil Dennis for the **ELECTRON £7.95**.

PENGI VE 03-32

Wandering around an ice flow may seem to be an idyllic way of life to some people, but my advice to such philanthropists is: try it. It's not that life out here is a bore. I mean, I lose all my aggressions kicking the hell out of ice blocks. 'Strange habit,' I hear you say; but you don't know what's going on around here. Let me fill you in. It's quite simple really. If you want to get from 'A' to 'B' around here you have to go via 'C'. This is largely due to the area's ice making machine going berserk and trying to compete with Mother Nature. This overgrown refrigerator thought anything nature could do it should better. I could live with this if it was the only problem since I'm beginning to enjoy this bizarre ice hockey. Unfortunately this is the least of my worries. The other penguins around here have been eating plankton for so long they're starting to radiate from all the trace elements they've been consuming — and I think it's affected their brains as these possessed pengis seem to hate any of their brothers who doesn't look like them — and I am not about to stay here and argue with them — anyway, whoever heard of a penguin having a conversation...

Pengi for the **ELECTRON £7.95**

PLAY THE

Arcade Action For The ZX Spectrum

If you want Arcade quality control for your Sinclair ZX Spectrum, you'll find the Protek combination hard to beat. The interface is compatible with a range of software including a number of titles from:
ULTIMATE, SILVERSOFT, RABBIT SOFTWARE, QUICKSILVER, QUEST, PSION, NEW GENERATION SOFTWARE, IMAGINE, OCEAN, plus many more.

The protek joystick interface is simple to use. It just plugs in at the back of your Spectrum and is compatible with any "Atari type" Joystick Connector. We recommend the Spectravision Joystick at only £9.95 for Pistol Grip Joystick with a top and base fire button plus specially contoured shape and rubber suction cup footing for single hand operation.

STOP PRESS * Now compatible with Zzoom * Jet Man * Kong * and Grid Runner

ZX Spectrum 16k & 48k

THE GAME

HUNTER-KILLER

For the 48K ZX Spectrum

Can you Captain a World War II submarine, hunt the enemy then destroy him with your torpedoes?

Realistic simulation including:

- ★ Four high resolution screens
- ★ 18 control functions
- ★ Solo or dual computer option
- ★ Quick-kill practice features
- ★ Asdic, radar and depth sounder
- ★ Accurate and realistic chart
- ★ Visible torpedo tracks
- ★ Periscope with raise/lower option and 360° view
- ★ Seabed, destroyer and mine hazards
- ★ 3D view of the target
- ★ Enemy air attack
- ★ Live target

ABBEX MAGIC

8 GREAT NEW GAMES FOR THE SPECTRUM, VIC 20 and CBM 64

1 KRAKATOA - 48K SPECTRUM - £5.95

... "My whole body ached as I scrambled back into the chopper ... the subs were back! In the five days that the tanker had been sheltering in the bay, not one hour had gone by when they hadn't tried to dispatch a defenceless tanker to the deep ... The rockets were coming in over Krakatoa and the constant explosions had brought the volcano to life! I had a tough choice to make, I could stay with the tanker and make sure it didn't end up like the others, or get the Islanders off the volcano, it wasn't going to be easy! Almost impossible! But I was going to try both! Arming the rockets I lifted off and headed for trouble ..."

2 PILOT - 64 - Commodore 64 - £7.50

It's your first solo flight. Pilot the "Leander", Class 454, 30 seat prop plane out of Norwich airport. Using your memory of the route shown to you before take off, safely negotiate the crosswinds, military air-zones and other hazards. With over sixteen different types of analog and digital read out, including artificial horizon, air speed indicator, compass, flaps, instrument landing systems and stall warning, fly your way back to base and land. Superb machine coded simulation of night flying programmed by a real pilot! HIGHLY COMPLEX, DIFFICULT YET FASCINATING GAME for the Commodore 64.

3 COSMOS - SPECTRUM 16/48K

**SPECIAL XMAS OFFER ONLY
£3.50**

Wave after unrelenting wave of Xenophobic alien attack interspersed with ever more frequent Asteroid and Cosmiad raids, combine into an unending rain of deadly debris. WITH RADAR AND THERMOCLASTIC HEAT LANCES, LET RIP IN THIS GRAPHIC MAELSTROM.

4 SUPERTALK - 48K SPECTRUM - £6.95

Add any speech, accents, sentences and sound effects to your program. Incredibly simple to use. Record the noise or word on the tape recorder and play it back to the computer and it's synthesised! Great fun results as the sound of real people, guns, cars, planes in your program, stuns and amazes all! A new concept in speech synthesis a must for all programmers.

5 ATLANTIS - 16K VIC-20 - £5.95

It's feature packed. With over sixteen different boards, each with gradually increasing difficulty. Manipulate your submarine past 10 different types of danger. Avoid depth charges, force fields, booby traps, rocks, enemy submarines, mines, crabs, sharks, underwater missiles, mazes and whole hosts of under water hazards as you battle your way to Atlantis. Supreme colour, sound, and graphic action. All machine coded with joy-stick option, 2 player option and high score.

6 SPIDER STORM - UNEX, VIC 20 - £5.95

The enormous XITAN 1 rocket streaked skywards. Its vital mission to save the last remnants of the human race that resided in its holds. Dennis Droid sat contently in the hatchery quietly reviewing his new and important job. When suddenly the ship shook violently as it was invaded by swarms of the most devilish destructive spiders you could possibly imagine. Dennis sprang into action, seizing his Megadon Atomizer he began blasting "Take that! and that!! ZAP!! POW!!!" The battle continued. "How many can there be left?!"

7 WAR GAME - 16K SPECTRUM - £5.95

I couldn't believe my eyes, but there they were. The teletale red lines I'd seen so often in training. Fourteen years of boredom in this seat and it had happened! As if in a dream my hand flashed across the terminal keyboard, storing, projecting and calculating. The computer helped, but I pressed the buttons destroying those evil missiles before they struck the cities below! Was this the end!

8 E.T.X. - 16-48K SPECTRUM - £5.95

Home computing magazine say "Speech is effective and must be at the limit of Spectrum capabilities, graphics are excellent and animation superb. A combination of graphics adventure, maze and chase games, makes this an unusual fascinating and addictive program which must rank among the Spectrum classics." VALUE FOR MONEY 100%! GRAPHICS 100%! SCORE 100%! This is an objective assessment by an independent body. There can be no doubt that this is the best.

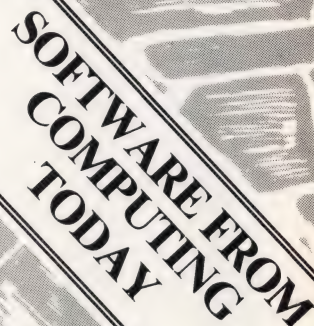

**YOUR
PROGRAM
HERE**

ABBEX IS LOOKING FOR PROGRAMMERS capable of writing quality educational and games software for all computers including the TS 2000 (U.S. Spectrum). Computers will be supplied. If you want your programs professionally retailed around the world come and talk to us!

ABBEX ELECTRONICS — TAVISTOCK HOUSE, 34-36 BROMHAM RD, BEDFORD, HERTS. MK40.
Tel: 0234-213571/2/3/4 ext. 2.

One of the first software houses, Abbex has shied away from the trend of producing as many games as is technically possible, rather we have concentrated on value for money with games that are really good fun! With over 30 programmers submitting original material for the CBM 64, Dragon, Oric, Spectrum, Laser and VIC 20, we are bound to have your PERFECT PROGRAM. With SUPERB ORIGINAL GAMES CONCEPTS we feel we live up to our GUARANTEE OF EXCELLENCE. If your dealer doesn't stock Abbex software ORDER DIRECT AND GET FIRST CLASS 24 HOUR DELIVERY.

**SOFTWARE FROM
COMPUTING
TODAY**

What are you . . . Barbarian or Wizard?

The Valley is a real-time game of adventure and survival. You may choose one of five character types to be your personal 'extension of self' to battle and pit your wits against a number of monsters. Find treasure, fight a Thunder-Lizard in the arid deserts of the Valley, conquer a Kraken in the lakes surrounding the dread Temples of Y'Nagioth or cauterise a Wraith in the Black Tower. In fact live out the fantasies you've only dared dream about. BUT BEWARE. . . more die than live to tell the tale!

Disc version (£13.95 each inc P&P and VAT) available for: Apple II (DOS 3.3), Sharp MZ-80A and PET 8032 (8050 drives).

Fill in the coupon and return it to CT Software, ASP Ltd., 145 Charing Cross Road, London WC2H 0EE and become one of the many to play... The Valley...

Tape@£11.45 all inclusive. **I enclose cheque/PO for £.... (payable to ASP Ltd).**
Disc@£13.95 all inclusive. **OR Debit my Access/Barclaycard (delete as necessary)**
Article reprint@£1.95 all inclusive.

SOFTWARE LISTING

Looking for a program to buy? Look no further! If it's available, it's listed here in our exclusive and comprehensive software checklists.

Looking through any computer magazine can be a bewildering experience if you're in search of a program. Count the hundreds of ads and thousands of titles on sale and it would be easy to lose heart!

We've tried to sort out the confusion, and the sheer numbers, to present an easily understood list for each machine. Where possible, we have eliminated duplications, so that the same tape with a different label is not listed twice. Rather it should be credited once, with as many suppliers as we could find.

Table Codes

In order to fit as many programs as possible into our pages, we have had to use codes for some columns, considerably shortening the wording.

The information given for each program is: Title, memory required to run it, company producing it,

whether tape/cartridge or disk, type and supplier and price.

The codes we have used are:

Program Type

- GM = Game
- BS = Business routine
- UT = Utility (ie. programming aid)
- DO = Domestic
- ED = Educational

How Sold

- R = Cartridge (may include memory)
- C = Tape (cassette)
- D = Disc (for expanded systems)
- L = Listing (sold as print-out)

Due to overwhelming response we have been forced to alternate machines included in our checklist each month.

This month, we have re-coded all the dealers, and their names and addresses will now appear in the section to which they refer. This should lead to clearer referencing and help your search.

Not Here?

To companies whose products are not listed herein we can only say **TELL US ABOUT IT!** This applies particularly to the smaller retailer who may sell only half a dozen or so programs for one machine. If you produce software for any of the machines on the market today, then we would love to include your wares in our checklists. Send it in to us, marked for the attention of the Editor (in our format *Please!*) or ring Jane Price on 01-437 1002 as soon as possible.

SOFTWARE

SPECTRUM GAMES

SPECTRUM DARTS (48K) Five games of darts for 1-5 players, 501, Cricket, Killer, Round the board, Noughts & Crosses, four levels of play per game, take on the computer or friends at these games of skill and judgement **£5.50**

WHÉLER DEALER Game for 2-20 players. Become a tycoon of the motor trade, you must obtain gear-boxes, tyres and engine to produce cars for sale, form syndicates, buy and exchange parts, buy dealerships, but be careful, you may become bankrupt and have to liquidate, find out what your made of, have you got what it takes to become a wheeler dealer **£5.50**

VIC-20

JACKPOT This is it. The ultimate fruit machine for the Vic with nudge, hold and respin 100% machine code. "Overall jackpot is a beautifully written simulation, giving superb graphics, animation and use of colour. In fact this programme makes Commodore's fruit machine cartridge look unbelievably cheap and nasty". *Home Computing Weekly No 20, 19/7/83.*

KWAZY KWAKS Accuracy and speed are required for this shooting gallery, superb use of colour and graphics in this new and challenging game from the author of "JACKPOT", 100% machine code program, too the same high standard joystick or keyboard control. For the unexpanded Vic **£5.50**

PACMANIA Choose your own game from the following options — difficulty 1-3, speed 1-3, size of maze 1-3, visible or invisible maze, still or moving power pills, define your own key controls, any combination, if this is your type of game, then this is the one for you, for the 3K expanded Vic only **£5.50**

BUGSY (Joystick Only) This is a Minefield with a difference as you step on the stones whilst collecting purple boxes which give you both time and points, they disappear from beneath your feet. DO NOT DESPAIR! "BUGSY" will randomly replace the stones but avoid bumping into him or its sudden death! An original compulsive and challenging game **£5.50**

MINI-ROULETTE — PONTOON — HI-LOW Three great games of chance for the Vic, try to beat the computer. Hours of fun, full colour, sound effects and tunes **£5.50**

DATABASE Create your own files and records on tape **£7.50**

SUPER BANK MANAGER A full feature version any memory size, but needs 3K expansion **£7.50**

COMMODORE 64

JACKPOT 64 At last its here, specially written for the 64, by the author of "JACKPOT" the ultimate Fruit Machine program for the Vic **£5.50**

WESTMINSTER A game for up to four players, can you lead the party of your choice and win the general election, you tour the 60 constituencies (seats) buying votes, when you can, (just like the real thing), this must be one of the first board type games specifically written for the computer. Why play on your own, have fun with your family and friends playing WESTMINSTER **£5.50**

RED ALERT A game for 1-4 players, with sound and graphics. Make money in casinos, commit robbery, hide from the police, hire secret agents, (some of whom can be treacherous), negotiate for weapons, find and attack the secret rocket base to launch the missile, and watch the havoc and destruction caused. There no turning back from "RED ALERT" **£5.50**

LUNAR RESCUE Our new version, avoid the asteroid belt, to rescue the stranded scientists, then fight your way back to the mother ship, fast reactions are required to safely land and dock your lunar module **£5.50**

M/C SOFT 64 Assembler and Disassembler, with decimal to hex converter, everything out program for the Vic will do and more **£7.50**

BANK MANAGER As our Super Bank Manager, but for the 64 **£7.50**

PURCHASE LEDGER Easy to use, single entry, handles 400 invoices per month, Gross/Nett purchases, V.A.T. **£14.50**
Disk Version **£17.00**

Full documentations with all utility programs. Other software available for the Vic and Commodore 64, send for free brochure, including **RABBIT SOFTWARE** at **£5.50** each. Send cheques/PO's to:

MR CHIP SOFTWARE

WANTED: High quality software, of all types, for export and U.K. distribution. All programs now available on disc please allow £2.50 ea extra. **DEALER ENQUIRIES WELCOME.**

MICROTERMS

Address

A label or name (usually a *binary* or *hexadecimal* number) specifying a particular *memory* location.

Array

A special variable that is used to hold large amounts of string or numeric information in a row and column format.

Assembly Language

Means of representing *program* statements in mnemonics and conveniently handling *memory* addressing by use of symbolic terms.

BASIC

Beginner's All Purpose Symbolic Instruction Code. An easy to learn, widely used computer language.

Bit

A single *binary* digit, representing either a 'one' or a 'zero'.

Bug

An error in *software*.

Byte

A *binary* number, usually of eight *bits*. It can represent a number from 0 to 255 (8-bit byte) as there are 256 possible combinations of "ones" and "zeros" eight bits long.

Cartridge

A self-contained unit storing either ROM or RAM which plugs into a computer to expand the memory or provide a program.

Character Set

The list of letters, numbers and symbols that you can use to write programs and display information.

CP/M

A standard disc operating system that in theory allows software packages to be run on different machines. It stands for Control Program for Microcomputers.

Cursor

Character or graphic symbol used by the computer to denote where it's printing. Also used as a prompt to input information or a command.

Data

Simply, information. The raw material that the computer processes.

Debug

To correct the errors in a *program*.

Disc

Magnetic storage device allowing fast random access to a large volume of *data*. A full-size hard disc will hold, say, 5 *megabytes* or more; a smaller *floppy* disc typically holds from 80 to 250 *kilo* bytes but in either case the capacity is being increased all the time.

Display Mode

Means of indicating the form in which the computer's output will appear on the VDU screen. It is either text only, text and graphics or graphics only. The display mode is usually represented by a number and the difference between these numbers indicates the change in the display capabilities of the screen, for instance on the BBC computer Mode 0 gives a higher resolution than Mode 1.

DOS

Disc Operating System. This refers to the piece of computer code that controls the action of the disc drive. On some machines this code has to be loaded into the machines memory and on others it is present in the ROM onboard the disc drive. The DOS tells the disc drive how to load and save programs on the disc as well as carrying out any disc management functions such as updating the directory.

Dummy Variable

This is a variable that is defined at the beginning of a program that has no use until later on in the program.

EPROM

Erasable Programmable Read Only Memory. When programming, writing typically takes one minute and erasing, by ultra-violet light, 10 minutes or longer.

Get

A BASIC command. It tells the computer to search the keyboard and bring back the value of the first key pressed.

Gosub

A BASIC command telling the computer to go to a subroutine within a program.

Gcol

A colour command used in BBC Basic.

Hard Copy

A computer printout or listing on paper.

Hardware

All the electronic and mechanical components making up a computer system.

Hex

Shortened version of hexadecimal, meaning '6 plus 10', which is a funny way of saying 16. It refers to the number system with a base of 16. This uses 0 to 9 and then A to F of the alphabet to represent its 16 digits. Two hex digits can be conveniently used to represent a byte (eight bits).

High Resolution

This means that you can pinpoint one dot on a screen rather than one square, giving you graphical pictures of much greater detail and accuracy.

Instruction

A set of *bits* which causes the CPU to carry out a particular task in a program.

Interface

Circuit which connects different parts of a system together and performs any processing of signals in order to make transfer possible (ie serial-parallel conversion).

I/O

Input/Output. A computer generally has one or more *ports* through which it communicates with 'the outside world' — *peripheral* devices such as a *keyboard*, video display (VDU), *printer* etc. An I/O port may be just an input or just an output or it can be bidirectional.

Kilo (K)

Normally means 1000, but stands for 1024 (2^{10}) when referring to memory.

Language

A repertory of commands — symbols, expressions etc, used to 'call up' the instructions or procedures a *processor* can execute.

Location

Physical position; *memory* location is the same as *address*.

Loop

Program technique where one section of program (the loop) is performed many times over.

Machine Language (or Code)

The lowest (and most tediously detailed)

level of program instructions. All higher level coding must be converted to machine language (by compiler or interpreter) before a processor can obey it.

Memory Map

Chart showing how memory is used by a computer. The arrangement of data and program within the memory.

Menu

A set of options displayed on-screen by a computer program from which the computer user can make a selection to implement.

Modulator

A device, included in every good hobby computer, which takes the computer's output and converts it to an RF signal on a suitable TV channel, giving you a cheap, convenient visual display.

Monitor

(1) The first level of computer operating systems: the program which turns machine code commands into action, managing input, output etc.

(2) A TV-type device which is specially constructed to handle video signals from a computer that does not have a modulator.

Parallel / Serial

Denotes the manner in which the computer's output is sent to its peripheral devices. Serial means that the information is passed out one byte after another and it uses a system of special characters to signify control codes of the device. Parallel communications are sent out along a series of wires using the high or low state of the wire to indicate which bits are set and therefore making up a byte.

Pascal

A very powerful, structured computer language, available on a variety of microcomputers.

Peek

This BASIC command reads a value from a location in the computer memory. It can be used to access either RAM or ROM.

Peripheral

Device attached to a computer, eg printer, plotter, disc unit, but not necessarily essential to its use.

Pixel

The single dot that is used to create characters displayed on the VDU. Also

the smallest display unit when using high resolution graphics.

Poke

This command places a value in a location of the computer's memory. It can only be used to access RAM or control registers.

Port

Terminal which the CPU uses to communicate with the outside world.

Print At

A BASIC command telling the computer where to begin printing.

Print Out

Same as *hardcopy*.

Program

A set of instructions, which tells the computer to perform a sequence of tasks also called software.

PROM

Programmable Read Only Memory. Proms are a special form of ROM, which can be individually programmed by the user.

Qwerty

The traditional typewriter keyboard layout adopted by computer designers.

RAM

Random Access Memory. Data may be written to or read from any location in this type of memory.

Register

A general-purpose memory, or set of memory locations, built into the micro-processor itself. Sometimes, particular registers may be designated for a specific purpose.

RND

In BASIC this stands for RANDOM and instructs the computer to select random numbers, it is often used in games programs. Because the numbers thrown up are mathematically related to the number preceding they are called pseudo-random numbers, not true random-numbers.

ROM

Read Only Memory. Memory device which has its data content established as part of manufacture and cannot be changed.

Routine

A whole program or part of a program designed to perform a single function or action.

RS232

A communications interface used for modems and for serial printers.

Sequential File

This is a data file that can be created on either a disc or a cassette system. As its name suggests, the information is stored one piece after another. If this information is to be changed or modified in any way then the whole file has to be read back into memory and then written back again once the changes have been made.

Software

The different kinds of program required to work a computer.

Source Code

Program written in one of the high-level languages and requiring compilation into machine language before use.

String

A sequence of characters used in a program.

Subroutine

A part of a program which performs a specific task and which is available for use elsewhere in a program, as often as you like.

Syntax

The grammar of a programming language.

Tab

Really stands for tabulate and allows you to automatically put figures and/or words into columns, forming a table.

Toolkit

Name given to a piece of code that runs in a computer independantly of any other programs and adds commands to the machines language to make the process of programming or debugging easier. Commands such as Renumber, Auto and Trace are common in toolkits. Toolkits take the form of a program that is loaded into the machine on power-up or a chip that is inserted on the circuit board which is then initialised by a SYS or USR call from the operator.

Variable

A symbol used in programming which is assigned a numeric memory address. You can change the value of variable at will to suit the program you are writing.

VDU

Visual Display Unit. Usually a TV set in hobby computers, but may be a video monitor which accepts the output directly from the computer.

Z80

Widely used microprocessor. It is used in the ZX81, Spectrum and TRS-80.

6502

Another widely used microprocessor. It is the heart of the PET, Apple and Atari computers.

SPEECHLESS??

**Micro Speech
lets
ZX Spectrum
talk!!**

☐ JUST PLUG IN AND USE

Micro Speech is easy to use — simply plug into your Spectrum and TV and enjoy a new dimension; instant voicing of all the keys infinite vocabulary at your command intonation to add character to speech exciting new range of sound and speech games

☐ IT'S AS EASY AS THIS!

LET S\$ = "me(rr)EE) krismus"
will say "MERRY CHRISTMAS"

☐ QUALITY SOUND

Micro Speech talks through your TV's loudspeaker, ensuring top quality sound.

☐ WHAT CAN'T IT DO!

Unlimited vocabulary means that Micro Speech can say **anything** it can even be made to yodel!
There is nothing it cannot say!

NEW SOUND GAMES USING MICRO SPEECH INCLUDE:

- ☐ Attic Attack : Lunar Jetman (*Ultimate*)
- ☐ Colour Clash : Shark Attack : 3D Monster Chase (*Romik*)
- ☐ Fire Birds : Lunar Rescue (*Lyversoft*)
- ☐ Voice Chess (*Artic*) ☐ Mined Out (*Quicksilver*)
- ☐ Mysterious Adventures Part 1 - 4 (*Digital Fantasia*)
- ☐ The Birds and the Bees (*Bug Byte*)
- ☐ Blastermind (*Martech Games*)
